Olivier Melison

GAME RULES

HOLY GRAIL GAMES

Will your Civilisation become a wealthy hub of trade and commerce?
A cultural and political powerhouse?
A haven of science and craftsmanship?
The birthplace of a great religion?

HISTORY BELONGS TO YOU…

Welcome to DOMINATIONS! Take on the role of a primitive tribe and transform it into a Nation whose influence will echo through the ages…

Place your triangular Land tiles carefully to expand your population and attain the Knowledge that will determine how your society is shaped over time. You can use this Knowledge to build Cities and master Skills; thus creating the legacy for which your civilisation will be remembered. Each time you master a Skill, it becomes one of the pillars of your society, opening doors to new possibilities and increasing your power. Doing all this and more will earn you points, and the player with the most points at the end of the game wins!

Mastery Cards aids

Score Token x 16

100

5

2
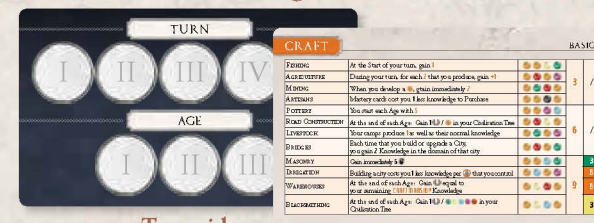

1. Place the **Cradle of Humanity tile** in the middle of the table.

2. Place the **Mastery cards** on the table, organised into their respective holders that they are accessible to all.

3

9

3. Place the **Scoreboard** to one side of the table.

4

4. Place the **Domination cards** next to the Scoreboard.

5. Each player draws **2 Objective cards** and **2 Monument cards**. They then choose 1 of each and reveal them to each other simultaneously. The Objectives and Monuments that were not chosen are then placed back into the game box. Place the Monument cards next to the Scoreboard, visible to all. Place the level cards for each Monument in a pile (in order, starting with the Level 1 card on top) on their Monument card. Place the Monument's standee next to its card.

7. Place the Land tiles into their holders. Each player then draws a hand of **7 Land tiles**. If they wish, a player may discard part or all of their hand and redraw so as to have 7 Land tiles in hand. They may only do this once.

6. Each player takes one **Player board** along with the necessary Knowledge sliders (1 of each Domain colour and 6 Reserve Limit sliders), as well as the player tokens in the colour of their choice. Place the Knowledge sliders at the bottom of the board, under 0. Place the Reserve Limit sliders on the first level of each Domain (above the 5).

8. Each player takes a **Campfire card**.

9. Randomly determine the order of play for the first Age. Place the Initiative tokens by order of turn on the Initiative track which is located on the Cradle of Civilisation tile (with I being the first player). Then, place the Influence and Victory Point tokens for each player next to the scoreboard.

You're ready to go!

THE GAME

Players take turns starting with the first player on the Initiative track and ending with the last.

> *Initiative: in case of a tie in any situation, the winner is always the highest placed (closest to first) player on the Initiative track.*

Each turn is part of an **Age**. Each Age is composed of **5 Turns** for each player. Once players have played 5 Turns each, there is an **End of Age** Phase.

A Game of DOMINATIONS lasts **3 Ages**. At the end of the Third age, the player with the **most Victory points** wins.

You score points during each Age by:

▶ ACQUIRING MASTERY CARDS

Each Civilisation is characterised by its achievements - technological, cultural or otherwise. Mastery cards offer you a variety of ways to acquire Victory points, whether by simply possessing them or by activating their unique effects.

▶ POSSESSING INFLUENCE

There is no direct conflict or warfare in Dominations, but there are multiple ways to exercise your influence on the world around you. Players score Victory points based on their Influence score and can also assimilate Mastery Cards from other players if they possess the most at the end of an Age.

▶ DOMINATING DOMAINS

At the end of each Age, you lose any remaining Knowledge you have in stock. Before doing so however, the player with the most remaining Knowledge in each Domain will be awarded a Domination card - a unique character that gives them points and a special power for the next Age.

You score additional points at the end of the final Age by:

▶ ACHIEVING OBJECTIVES

The game's Objective cards give you the opportunity to walk in the steps of one of the great civilisations of the past. They offer you a sense of direction at the beginning of the game, constraining you to achieve certain results, but also rewarding you with points if you meet their rather hefty requirements.

THE TURN

Each player turn is divided into 3 Phases: the **Grow Phase**, the **Build Phase** and the **Develop Phase**.

Once players have played 5 Turns each, proceed to the End of Age Phase.

THE GROW PHASE

The Grow phase represents the growth of your population and its spread into new and undiscovered territories! During this phase of the game, players place their triangular Land tiles around the Cradle of Humanity. Over time, your Nations will come into contact and learn from one another. With each Land tile you place, your Nation grows larger, and as your Civilisation grows, it will also learn - placing Land tiles earns you Knowledge, which is the main resource of the game.

There are 6 Domains of Knowledge in Dominations:

TRADE: YELLOW

Represents the principles of trade, wealth, and negotiation.

CRAFTSMANSHIP: ORANGE

Represents the disciplines of construction, farming, mining, woodwork, and metallurgy.

ART: BLUE

Represents painting, sculpture, theatre, poetry, but also oratory arts such as public speaking and diplomacy.

SCIENCE: GREEN

Represents the principles of mathematics, medicine, astronomy, and alchemy.

GOVERNMENT: RED

Represents the civic ideas of living as a society, such as administration, schooling, and military.

RELIGION: PURPLE

Represents the concept of theology and worship.

During their turn, the player must start by placing a Land tile from those available in their hand. This Land tile must be placed so that at least one side connects entirely to either the Cradle of Humanity or any available Land tile (which can be a tile placed by another player).

The player accumulates Knowledge based on the colours that are connected during this placement. The four resources present on the two tiles along the connected edge are activated and each produce 1 Knowledge point of the corresponding domain for the player who placed the Land tile. In addition, the Camp of the placed Land tile also produces 1 Knowledge point of the corresponding Domain.

The "Camp" is the larger coloured space in the center of the Land tile.
The "Resources" are the three smaller points around the outside of the Land tile.

Each time you gain Knowledge points, move your counter of the corresponding Domain on your Player Board to represent the Knowledge you gained.

► CONCENTRATION OF KNOWLEDGE ◄

When two resources of the same colour are connected face to face, they produce an additional Knowledge point of their colour.

Example : In the case below, Knowledge is attributed in the following way.

This tile placement produces 1 Craftmanship, 1 Religion, and 4 Trade (1 for the Camp and 3 for the matching resources which create a Concentration of Knowledge bonus as described above).

► PRODUCE VS GAIN

In Dominations, Producing Knowledge and Gaining Knowledge are two different effects which must be taken into account separately.

Placing a Land tile allows you to Produce Knowledge. Your Production can be improved by the Concentration of Knowledge effect, as well as the presence of Cities (cf. Building a City) or Monuments (cf. Building a Monument).

However, certain Mastery cards (cf. Develop a Mastery) as well as other cards can also affect the result, allowing you to Gain additional Knowledge based on your initial Production. Be sure to consider the difference between the two terms when resolving their effects! See the FAQ for more details.

Example: In the case above, a player with the "Bartering" Mastery card would Gain 1 extra Trade point.

► THE LOCUS ◄

During the game, a player may complete a wheel of 6 Land tiles, thus creating a Locus. In this case you do not Produce the resources present on the connected edges but rather all the resources in the center of the Locus, as well as the point from the Camp on the Land tile you added. However, when a Locus is created, the "Concentration of Knowledge" rule does not apply.

On top of these resources, you'll also be able to activate certain Mastery cards, as well as all Cities (see "Trading" below) on Land tiles that are part of the Locus.

Please note: If a tile placement creates several Locus simultaneously, then the player does not score them all - they must decide which Locus they wish to score.

► VESTIGIUM KNOWLEDGE

During the game you may gain Vestigium Knowledge, whether it be through Production 🌑 or Gained through effects **1**. When you acquire this Knowledge it may be of the Domain of your choice. It can also be split between multiple Domains unless instructed otherwise.

► RESERVE LIMITS ◄

At the beginning of the game, players are limited to 5 Knowledge points in each Domain. If the player acquires Knowledge that would take them beyond that limit, the additional Knowledge is lost. You can increase your limit by building Cities and purchasing certain Mastery cards. When your limit is increased, move your Reserve Limit slider up to your new limit to represent this.

When your Reserve of points reaches 20 you cannot increase it further. If the player acquires Knowledge that should take them beyond that limit, the additional Knowledge is lost. However, the player gains 1 Victory point (regardless of how much Knowledge is lost) every time they would go over 20. *See example on next page.*

For example, if the player had 20 points on their Turn and would gain 3 more from placing a Land tile, they instead gain 1 Victory point. If they did the same thing on their following Turn, they would again gain 1 Victory point.

△

THE BUILD PHASE

During this second phase of their turn the player can, if they wish, build a City **OR** contribute to a Monument.

▶ BUILDING A CITY ◀

Cities are the hubs of your Civilisation and proof of its growing influence and wealth. They provide big advantages during the game by affecting Mastery cards, your Influence score and how much Knowledge you can stock at any given time.

A City must be built on a Land tile's central Camp space. In order to build a City, the Camp must be unoccupied and the player must pay Knowledge points of the same Domain colour as the Camp on which it is placed.

Once these points have been paid, the player then places a City token on the relevant Camp space.
A City can be built on any Land tile with an unoccupied Camp space, no matter which player the Tile was placed by and when.

A player can also upgrade an existing City, taking it up to level 2 or 3, by paying Knowledge points based on the colour of the Camp. When a City is upgraded, a new City token is placed on top of the existing one to show that it has gained a level.

Cities must be upgraded one level at a time: you cannot immediately build a City of level 2 or 3. The maximum level a City can reach is 3. Each player has a limited number of City tokens, and once they have been spent, you cannot build any more Cities.

Once purchased the City also gains you bonuses depending on its level:

CITY LEVEL 1 :

- **Cost :** 3 Knowledge of the appropriate colour.
- **Influence :** +1
- Increases Reserve of that colour to 10

CITY LEVEL 2 :

- **Cost :** 6 Knowledge of the appropriate colour.
- **Influence :** +2
- Increases Reserve of that colour to 15

CITY LEVEL 3 :

- **Cost :** 9 Knowledge of the appropriate colour.
- **Influence :** +3
- Increases Reserve of that colour to 20

As well as earning you Influence points (see "The Score Track" below) and expanding your Reserve - thus allowing you to stock more resources - Cities are a great way to easily obtain additional Knowledge points. Any time a player connects a Land tile to another Land tile upon which a City has been built, the owner of the City gains a Knowledge point of that City's Domain **per level of the City**. Additionally, if a player forms a Locus (by completing a full circle of 6 Land tiles), any Cities situated on the Land tiles forming the Locus are immediately activated with their owners gaining Knowledge points as stated above. So choose where you place your Cities carefully!

▶ BUILDING A MONUMENT ◀

Throughout history, humanity has erected some truly awe-inspiring structures. Testaments to science, culture, faith and more. In Dominations, your civilisation can also leave its mark on the world…

Monuments are a common objective that all players can take part in if they wish. Each time a player contributes to a Monument, they gain specific Victory points and bonuses.

If a player wishes to buy the first Level of a Monument, they must first place the Monument's Tile on the Board according to the restrictions shown on its card (if any). Monument tiles come in two shapes : **Diamonds and Circles.**

Diamonds must be placed next to an existing Land tile following the normal restrictions for Land tile placement. They must also be placed adjacent to a City of a certain Domain. Consult the Monument's card for more details. Some of these Monuments mark the shores of great seas or the borders of your lands. As such, they may only be connected to Land tiles via sides that possess a Reward Icon and Land tiles may only later be placed connecting to sides that possess a Reward Icon. Cities built next to these immediately gain their owner that reward. These may be gained when the Monument is placed or later, when the City is built. These rewards are only scored once, not per City level.

Note: The "Great Wall" Monument tile counts as a diamond.

Example: In the case below, the Pharos Monument awards points to adjacent Cities. The Trade City which was present when the Monument was placed belongs to the Black player: they immediately gain 10 Victory points. Later on in the game, if another player builds a Science City on the available space next to the Monument, they will also gain 10 Victory points.

REWARD ICON

Circular Monuments are placed over the centre of a Locus. Each one of these Monuments is affiliated with Cities of a certain Domain. For each City of the corresponding Domain present in the Locus, that City's owner gains points as indicated on the Monument's card. These can be scored immediately when the Monument is placed, or later when a City is built next to the Monument.

Example: In the case below, the Hanging Gardens Monument awards points to Craftsmanship Cities. The White player will therefore gain 5 Victory points when the Monument is placed, as they have 1 Craftsmanship City on the Locus (the City's level is not taken into account). The Black player also gains 5 points as they too have a Craftsmanship City on the Locus. If another player builds a City on the available Craftmanship Camp later in the game, they will immediately gain 5 Victory points as well.
Note that even though certain Monuments have Knowledge indicated on their Tiles, you do not Produce or Gain any Knowledge by placing down a Monument. However, any Land tiles subsequently connected to the tile activate those resources as per the normal rules. Circular Monuments can be placed over resources belonging to a Monument Tile.

Any player can then participate in the construction of a Monument by paying the resources shown on the top Monument Level card. Once purchased, the player takes the Level card in question and integrates it into their Civilisation Tree, just like a Mastery card (see Develop Phase section below).

During your turn, you may only develop 1 new Mastery card OR upgrade 1 previously acquired Mastery card.

▶ **DEVELOP A MASTERY** ∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞

During their turn, a player can acquire a new Mastery card by paying the value required to develop that card, then adding it to their Civilisation Tree.

These Mastery cards represent various skills such as Painting, Road Building, Agriculture, and so on. The effects noted on the card take effect as soon as it is placed into your Civilisation Tree. There are 3 different values of Mastery card available: value 3, value 6, and value 9. Mastery cards at a value of 9 are quite an investment and also have prerequisites, but their effects are the most powerful!

A player can also upgrade the Mastery cards they already possess. To do so, pay the required cost for each card (indicated in the lower left hand corner) before turning it over. It is then considered Advanced (with a black background).

- **Common objective:** Monument levels must be built in order (you cannot build level 2 before someone has built level 1). However, any player may build the current level available (the one on the top of the pile) even if they did not build the previous one(s).
- **Monument Level Cards:** Players may look at any of the monument level cards (and not just the one on top) as they please.
- **Dominating Monuments:** Players compare the number of level cards in their Civilisation tree and the number of City levels they control that are adjacent to a Monument in order to determine who controls it (see Objectives and Final Scoring).
- **Monument effects:** Some Level cards have effects written on them. These bonuses take effect as soon as the card is integrated into the Civilisation Tree.

THE DEVELOP PHASE

In this final phase of your turn, you can choose to develop the skills which will become the pillars of your Civilisation. All Domains start out with similar abilities but as you work your way through them you will find that each has their own speciality. Combining these cards into powerful combos will give you a big advantage as the game moves forward.

▶ **PREREQUISITES** ∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞

Level 9 cards have a second, smaller value and Domain alongside their Cost; this is their prerequisite. To acquire such a card, you must already have another Mastery card of that Domain and Cost (or higher) in your Civilisation Tree.

▶ **RULE OF 1** ∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞

You may only have 1 copy of any Mastery card in your Civilisation Tree.

Whether you're acquiring a new Mastery or upgrading an existing one, the effects noted on the card, including the scoring of Victory and Influence points, take effect as soon as it is acquired/improved.

CIVILISATION TREE

Your Civilisation Tree represents the disciplines upon which your Nation has been built. Each Mastery card that you obtain becomes one of the fundamental elements of your Civilisation, an integral part of your Legacy for which you will be remembered through the ages. During the game, you will be building your Civilisation Tree around your Campfire card.

Campfire card: Your Campfire card is the starting point for your Civilisation Tree. As well as allowing you to acquire new Mastery cards, this card grants you a free exchange action. At any time during your turn, you may use it to transform 2 Knowledge of the same colour into 1 Knowledge of a different colour. You may perform this action as many times as you like.

To integrate a card into your Civilisation Tree, you must first be able to place it. A card must be placed:

- Directly adjacent to a card you already own (not diagonally).
- Some cards will include the NODUS icon. Note that this icon refers to a full Nodus produced by connecting 2 cards. Half Nodus' that have not been connected yet do not count.
- So that it is connected to any adjacent cards via a Nodus of identical colour (Nodus are the coloured half-circles on the sides of the cards, which connect with other cards to create a full Nodus).

If you cannot fulfill these three conditions when acquiring a new card, you may not take that card. Each Mastery card is available in four copies, which each copy having a different Nodus configuration. Once a card has been placed, it cannot be moved.

VESTIGIUM

White nodes on Mastery cards are called Vestigium. These can connect to any other colour and count as a Nodus of that colour. They also often appear on Monument Level cards. However, two Vestigium cannot be joined together.

CORRUPTIO

Black nodes on Mastery cards are called Corruptio. These cannot connect to any other Nodus, even other Black ones. They are effectively a dead end in your Civilisation Tree.

Once the Development phase is over, the turn passes to the next player on the Initiative track.

► THE SCORE TRACK ◄

There are two different types of scoring in DOMINATIONS: Influence Points and Victory Points.

► INFLUENCE POINTS

There are no wars in DOMINATIONS, but over time, your Nation will become more powerful and influential, and Influence Points represent this growing prestige.

As soon as you acquire an element with the "Influence" symbol, you advance your Influence counter on the Influence track to represent this. The Influence track is the yellow track that goes around the edge of the scoreboard. Influence is mostly taken into account at the end of each Age but can have other effects as well (see End of Age and Final Scoring).

► VICTORY POINTS

In DOMINATIONS you will regularly score Victory Points and it is these points that will win you the game! Your contributions to Monuments, your Mastery cards and many other effects will provide points and allow you to move along the score track. As soon as you acquire an element with the Victory point symbol you immediately score that many points - advance your token on the Victory track to represent this. The Victory track is the grey track that snakes around the centre of the board.

If you reach the end of the Score Track (100 for Victory points and 50 for Influence) take the corresponding Score token (50 for Influence or 100, 200, 300 etc. for Victory points) then move your token back to the start of the track and continue to add points if you have any left to score.

Please note: *each Score token is double-sided, with 200 on the back of 100, 400 on the back of 300 etc.*

END OF AGE

When all the players have played 5 turns each, proceed to the End of Age phase. At the end of each Age, players must perform the following actions (in order as written below) before beginning a new Age.

Reminder: In the case of a draw in any situation, the winner is determined by the player highest (closest to 1st) on the Initiative Track.

▶ END OF AGE EFFECTS ◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇

If a player possesses any cards in their Civilisation Tree with "At the end of each Age" effects, they may activate these powers now.

▶ RESOLVE INFLUENCE ◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇

First, the player with the highest number of Influence points can assimilate a Mastery from another player. They may choose a Mastery card currently possessed by another player and take the same card from among those still available in the card holders. **This card is not taken directly from a player.**

The only restriction to this action concerns the level of Mastery card you're trying to assimilate and your level of Influence:

- If your Influence level is 12 or less, you can only assimilate cards of value 3.
- If your Influence level is between 13 and 22 you can assimilate cards with a value of 3 or 6.
- If your Influence level is 23 or more, you can assimilate cards with a value of 3, 6 or 9.

The player may also choose to assimilate an Advanced version of a Skill that has been developed by another player, **on the condition that they already possess the base version of that Mastery themselves**. Should they choose to do so, they simply turn the card that they already possess to its advanced side without paying the cost. They do not take an additional copy of that card. The effects of an assimilated card take effect immediately.

Once the leading player has assimilated a card, each player scores Victory Points equal to their current number of Influence points. All players keep their Influence points for the next Age.

▶ DETERMINE ROLES ◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇◇

Whoever has retained the most resources in each Knowledge Domain at the end of an Age gets the help of a high-ranking citizen adept in that type of skill: A great Inventor, Diplomat, Craftsman etc. The player takes the corresponding Domination card for the next Age and gains a special benefit from their assistance.

GOVERNMENT - GOVERNOR (+6VP / 0 VP IN A 2 PLAYER GAME)

You determine the Turn order of the next Age. The player with this card places the player tokens onto the Initiative track in the order of their choice for the next Age.

RELIGION - HIGH PRIEST (+5VP)

You draw 2 additional Land tiles into your hand at the start of the next Age.

ART - DIPLOMAT (+4VP)

You immediately gain 2 Influence points.

TRADE - TRADER (+3VP)

Each time you place a Land tile, that Land tile's Camp generates 2 Knowledge instead of 1 for the rest of the Age.

SCIENCE - INVENTOR (+2VP)

Once during the next Age, you can activate a Land tile already in place instead of placing a new one (scoring resources as per the usual rules , including for Cities). If reactivating a tile would cause a normal connection and a Locus, you may choose which one takes effect. It is possible to use the Inventor to reactivate a Locus where a Monument has been constructed: lift up the Monument and score the resources underneath.

CRAFTMANSHIP - FARMER (+1VP)

Once per Age, during one of your turns, you may place a second Land tile immediately after placing and scoring the first. This second tile follows all of the normal rules for tile placement.

Each player immediately scores the number of Victory Points stated on each card.

Once Domination cards have been used (if their effect can only be used once), they may be returned to the common area of the table.

A player may take several or even all of the Domination cards. If no player has any remaining Knowledge points in a Domain then the Domination card cannot be claimed.

▶ **BEFORE STARTING THE NEXT AGE** ∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞

- Each player resets all of the Knowledge points on their player board to zero. You will start the next Age with no knowledge, unless you have one or more cards indicating otherwise.
- Players replenish their hand of tiles.
  - They may choose to keep one or more of the Land tiles from their remaining hand, discarding the others to the back of the Land tile holders.
  - They may then draw back up to 7 Land tiles (or more if they have a card indicating otherwise) to complete their hand. Just like during initial setup, a player may choose to discard part of or all of their hand once, and draw back up to 7 (or more) Land tiles. You may only redraw your hand once per Age.

The next Age can then begin.

△

![END OF GAME]

The first and second Ages are played the same way. The Third (and last) Age is played slightly differently however.

▶ **END OF AGE** ∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞

Once this Third Age is over, players proceed to the Influence phase and trigger other End of Age effects as normal. For the distribution of the Domination cards, this follows the same rules as usual, except that each card is worth 3 points rather than its usual value and does not activate its ability. For example, the Diplomat does not allow a player to gain Influence points at the end of the Third Age.

▶ **ADDITIONAL STEPS FOR FINAL SCORING** ◀

▶ **OBJECTIVE CARDS** ∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞∞

In Dominations, the aim of the game isn't to copy History. However, Objective cards give you the chance to walk in the footsteps of some of History's greatest Nations. Each Objective card has 5 Objectives that gain you Victory points at the end of the game if you manage to complete them. These can be having a number of Monuments or Cities of a certain level, a certain number of Nodus of a given colour in your Civilisation Tree, and more. The first 3 Objectives are based on the Nation's real History, whereas the final 2 represent what they could have become, had they had more time, more resources, more luck...

EGYPTIAN

4x ⊕①	1x 🏛	4x 6️⃣6️⃣6️⃣	35 👤	1x 🏛
2x ⊕②		3x 9️⃣9️⃣9️⃣		

| OBJECTIVES	1	2	3	4	5
VICTORY POINTS	10 🏆	20 🏆	40 🏆	70 🏆	100 🏆

5x / 1x **You must finish the game in possession of a certain number of Cities of certain levels. In this case: five level 1 Cities and one level 2 City** of a higher level than the one stated count towards your Objective. For example, a City of Level 2 or 3 can count as a Level 1 City.

10x **You must finish the game with a certain number of your Cities adjacent to one another. In this case: 10 adjacent Cities.**

Example: At the end of the game the White player has one group of 8 adjacent Cities, and one group of 3 adjacent Cities. They count as separate groups of 8 and 3 : they cannot be added together to create a group of 11.
10x **You must finish the game with a certain number of Cities that are not adjacent to one another. In this case: 10 non-adjacent Cities.** A group of adjacent Cities counts as one non-adjacent City.

Exemple: In the case above, the White player's two groups of adjacent Cities count as 2 non-adjacent Cities.

1x **You must finish the game in control of a Monument.** To do so, a player adds the number of level cards they possess for a Monument in their Civilisation tree to the number of City Levels that they have built adjacent to that Monument. The player with the highest score controls that Monument. In the case of a Tie, the player in possession of the Level 1 card for that Monument wins.

8x / 5x / 3x **You must finish the game with at least a certain number of Nodus in your Civilisation Tree. In this case, 8 Trade Nodus, 5 Government Nodus and 3 Science Nodus.**

Reminder: these must be whole Nodus created by joining two Mastery cards. Half Nodus do not count.

30 **You must finish the game with a certain number of Influence Points. In this case, 30.**

4x / 3x **You must finish the game with a certain number and Domain of Mastery cards in your Civilisation Tree. In this case: four level 6 Trade and/or Science Mastery cards AND three level 9 Trade and/or Government cards.**

The number of points you score from your Objectives depends on how many you achieve:

OBJECTIVES	1	2	3	4	5
VICTORY POINTS	10 🏆	20 🏆	40 🏆	70 🏆	100 🏆

▽

Once the scores from Objectives have been calculated, the player with the most Victory Points wins the game! In the case of a tie, the player highest on the Initiative track wins!

△

GAME GLOSSARY

- **Age:** Composed of five Turns for each Player.

- **Board:** Space on the table where Land tiles are placed.

- **Build:** Paying Knowledge points to place a City token or contribute to a Monument.

- **Camp:** Large coloured space on each Land tile.

- **Campfire card:** Starting card for a player's Civilisation Tree.

- **City:** Represented by players' City tokens, Cities can be built on Land tiles.

- **Cities (adjacent):** Adjacent Cities are Cities built on Land tiles that are directly adjacent to one another.

- **Cities (non-adjacent):** Non-adjacent Cities are Cities built on Land tiles which are not directly adjacent to one another.

- **Civilisation Tree:** Arrangement of Mastery cards specific to each player.

- **Corruptio:** A black Nodus which cannot be connected to another Mastery card (including other Corruptio).

- **Cradle of Civilisation:** Starting tile for the board.

- **Develop a Mastery:** Paying Knowledge points to add a Mastery card to your Civilisation tree.

- **Domain:** There are six different domains of Knowledge: Government, Art, Craftsmanship, Science, Religion and Trade.

- **Gain:** Obtaining Knowledge points in any other way than through the placement of a Land tile, such as the effect of a Mastery card or Monument.

- **Game:** Composed of three Ages (representing around 3000 years in the life of your Civilisation).

- **Initiative Track:** Track on the Cradle of Humanity which determines order of play.

- **Knowledge:** Main game resource. Each Domain counts as a separate resource type.

- **Land tile:** Three-sided tiles that are placed by all players during the game.

- **Locus:** The centre of a complete circle of six Land tiles.

- **Mastery cards:** Purchasable skill cards.

- **Monument:** A common Objective to which all players can contribute.

- **Monument card:** The main card of a Monument which indicates the conditions of placement, the Monument's effect, and the number of levels available.

- **Monument Level card:** Card representing each level of a Monument as it is built, integrated into a player's Civilisation Tree when purchased.

- **Monument Tile:** The tile belonging to each Monument (including the standee), which is placed on the board by the player who purchases the first level.

- **Nodus:** The coloured circle allowing players to connect Mastery cards on their Civilisation Tree. Two half-circles connect to make a full Nodus.

- **Produce:** The method of obtaining resources through the placement of a Land tile, which includes the activation of Cities. Producing resources can activate Gain effects (cf. Gain).

- **Resources:** Small coloured dots on Land tiles.

- **Reserve:** The maximum number of any one type of resource that you can possess at once. Determined by the highest level of City you have on any Camp of that colour.

- **Turn:** Action phase of each player.

- **Upgrade a Mastery card:** Paying Knowledge points to improve a previously acquired Mastery card, which is flipped over to its Advanced side.

- **Vestigium:** A colourless Nodus which can be connected to any other colour of Nodus. It then counts as a Nodus of that colour. May not connect to another Vestigium.

F.A.Q.

Dominations is a game where you are free to choose your own path to victory. In order to make this experience as rich and enjoyable as possible, we've provided you with a wealth of different components. The core of the game is mixing them as you see fit into new and exciting combinations that will (hopefully) lead your nation to victory.

Despite having been as thorough and clear as we can with the rules, it's impossible to cover every possible situation that could arise without turning this rule book into a rule grimoire!

With so many moving parts, you may come across rare cases during a game which have not been explained within these pages.

In these situations, we recommend using common sense to determine the best course of action. If you can't come to an agreement, then players should vote on it. Failing that, flip a coin to determine how to proceed.

Once again, these situations should be very rare and, for the majority, should be easily resolved. In any case, don't let a small rules quirk hold up your game!

In the meantime however, here's some of the questions that get asked the most.

▶ WHY PRODUCE AND GAIN?

Why these two terms? You may have noticed that certain cards allow you to gain more resources based on those you generate through tile placement. In order to avoid an infinite loop of Knowledge generation, we chose to define these two methods of Knowledge creation separately.

As a reminder: *Land tile placement and City activations are the only way to Produce Knowledge. Everything else Gains you Knowledge. Therefore, Gain effects cannot combo off of other Gain effects.*

For example: *The Fishing Mastery card Gains you Knowledge at the start of your turn. The Agriculture Mastery card Gains you additional Knowledge depending on how much you Produce. As the Fishing Mastery card has a Gain Knowledge effect, it cannot benefit from the bonus granted by the Agriculture card. However, the Livestock Mastery card increases the Knowledge Produced by your Camps. As this is a Produce effect, it can benefit from the Agriculture bonus.*

▶ WHY CITIES AND CITY LEVELS?

Each civilisation has it's own vision of what an accumulation of civilisation should look like. For some it was great centres of power overflowing with life, whilst others favoured a more nomadic lifestyle of smaller encampments.

In order to differentiate between these notions in game and, once again, offer you more strategic depth; we included the notion of Cities and City levels.

When building your Cities over the course of the game, you can choose to cover more terrain by building many Cities, building fewer but more powerful cities, or anywhere in between. Of course, this choice brings with it different effects such as Influence, positioning, Reserve levels and so on.

Note that many cards and effects will ask you to differentiate between Cities and City levels. As a reminder:

- A "City" is present on any tile where at least one City token has been placed down, whether that City be level 1, 2 or 3.
- "City Levels" are the number of City tokens that make up your Cities.

A good example of the difference between these two is the Warfare Mastery card. The base effect of this card gains you influence based on the number of Cities you control - whereas its Advanced effect gains you influence based on the number of City levels you control. This makes it a great card for gaining an Influence advantage early on in the game, before transitioning into a strategy involving big level 3 Cities later on.

▶ MASTERY/MONUMENT LEVEL CARDS AND TIMING

Cards destined for your Civilisation Tree take effect as soon as they are added. However, as they are placed, different things happen: effects go off, Victory points or Influence are gained, Nodus are formed, etc. Some of these changes may activate other effects in turn.

All these changes are considered simultaneous and may be resolved in the order of your choosing.

For example: *The Templars Mastery card Gains you Influence for each Religion Nodus in your Civilisation tree. However, by placing this card you may be creating one or more new Religion Nodus. As the effects of the card and the creation of the Nodus are simultaneous, these new Nodus count towards the Influence gaining effects of the card.*

In the case of multiple Mastery cards being acquired one after the other, you must resolve the placement and effects of each card in turn, not at the same time.

▶ START OF AGE EFFECTS AND TIMING

Any rules which are stated as taking place at the start of an Age take effect as soon as the End of Age phase of the previous Age has been completed. Just like above, all of these effects are simultaneous and may be resolved in the order of your choosing.

▶ VESTIGIUM KNOWLEDGE AND BLACK NUMBERS

Black numbers shown on Mastery cards, Monument level cards, etc. are Vestigium Knowledge. This is essentially a joker resource and can count as a Domain of Knowledge of your choosing. In the cases where the amount of Knowledge Gained is higher than 1, You may Gain Knowledge from the same Domain or split it between multiple Domains, as you wish.

Please note: Certain cards whose effect reduces the cost of an action (such as developing a Mastery card or building a City) feature a black number. In these cases, the cost of the action must still be paid in Knowledge points of the relevant Domain type. For example, if you obtain a card allowing you to reduce the cost of a City by 2, then building a City on an Art Camp must still be paid for in Knowledge points of that type.

Additionally, you may end up producing Vestigium during your Growth phase. Once you have chosen the Domain for this Knowledge, it counts as Produced Knowledge of that Domain, and can benefit from Production bonuses given by certain Mastery cards (see *Why Produce and Gain?* above).

▶ ADJACENCY

In the case of Land tiles: a tile is considered adjacent to another if it shares one of its straight edges with it. Tiles which touch "diagonally" via their corners are not considered adjacent.

In the case of Cards: a card is considered adjacent to another if it shares one of its straight edges with it. Cards which only touch "diagonally" via their corners are not considered adjacent.

In the case of Cities: A City is considered adjacent to another if they are on Land tiles which are adjacent to one another.

▶ CONNECTED

Adjacent Cities controlled by the same player are considered connected. These Cities can form a chain of connected Cities. Any abilities which state that they effect connected Cities effect all Cities that are part of this chain.

▶ STACKING RESERVE LIMITS WITH MULTIPLE CITIES

Building bigger Cities allows you to increase your Knowledge Reserve limits. Level 1 Cities increase it to 10, Level 2 Cities increase it to 15 and Level 3 Cities increase it to 20. However, your maximum limit for each Domain is determined by the largest City you possess of that Domain, not the number of Cities, and their effects do not stack.

- Having 3 Level 1 Cities does not count as a Level 3 City.
- Having 3 Level 1 Cities does not increase your Reserve limit by 3x5 = 15.
- Having 3 Level 1 Cities of a Domain will leave you with a Reserve limit of 10. You can increase that to 15 by Upgrading one (or more) of these Cities to a Level 2, then to the maximum of 20 by upgrading one (or more) to Level 3.

▶ RUNNING OUT OF CITY TOKENS

In some games a player may run out of City tokens. The number of City tokens available to players was purposefully capped at 15 (or one per turn) so if this does happen it's perfectly normal. The player in question can no longer build Cities, but should turn their attention to Monuments as a way of scoring points during the Build phase if they find themselves in this situation.

▶ 0 COST

Through reductions provided by their Mastery cards and other effects, players may find that performing a certain action will cost them zero or negative Knowledge. In both these cases the player may perform the action at no cost. They gain nothing in the case of a negative cost however.
