THE HISTORICAL BATTLE GAME

RULEBOOK

ONUS!

GAME DESIGNER:

Luis Álvaro Hernández Albújar

SPECIAL COLLABORATION AND CONSULTING:

David Soria Molina (*PhD in Ancient History*).

ARTWORK: Paco Arenas

GRAPHIC DESIGN: Matías Cazorla Genre

COLLABORATORS:

Eduardo González Cauhapé-Cazaux, Sergio Rodríguez Yanes, Javier Romero, Jose Manuel Moreno Ramos, David García Martín, Enrique González, Mario Agudo, Omar, Jaime Hernández Albújar, Jose María Núñez de Castro, Jose Antonio Melguizo, Fede Lozano, Javier Zurera, Jaime Devesa, Andrés Delgado, Fernando Piedrabuena and Rodrigo Royo.

ACKNOWLEDGEMENTS:

To all the backers of our various crowdfunding campaigns, whose support and gratitude has been welcomed in every occasion, many of whom have become good friends and collaborators, both in this and other projects, THANK YOU!

We also want to thank the support received in the forums Darkstone, Puntadelanza, LaArmada, LaBSK, and many others; to Matías Cazorla for his advice, sensational work and help; to Paco Arenas and Ramsés Bosque, for the illustrations and that “isometric view” that we have worked so hard to create; to José María Núñez de Castro y José Antonio Melguiz for being champions and ambassadors of the game; to @uino from the Breaking War magazine; to Raquel López for her patience and prototypes; to Sergio (alias Fardalejo) from Darkstone for his advice; to José Manuel Moreno Ramos for his unconditional support, solitaire rules, playmats and promotion; to Manuel González from the game Krynea.

ONUS!

I - INTRODUCTION

*Have you ever dreamed of leading powerful armies of Antiquity?
Have you enjoyed a good historical novel about Ancient Rome and
would have liked to go back to those time in the midst of battle?
Would you like to change History or recreate what happened in a
historical setting?*

If you answered yes to any of those questions, then this is the game for you.

ONUS! is a historical battle simulation wargame, similar to miniature games, in which two armies face each other in battles of Antiquity.

ARMIES OF ONUS!

Lead your favorite faction. This game represents powerful ancient armies such as:

ONUS! PACK				ONUS! Rome vs. Carthage (GAME)		
	Romans	Carthaginians	Mercenaries			
						ONUS! Greeks & Persians (EXPANSION)
	Athenians	Spartans	Persians		Greek Merc.	
				ONUS! Macedonia (EXPANSION)		
ONUS! TRAIANUS					ONUS! Traianus (GAME)	
	Romans	Celts	Dacians	Roman Aux.		
						
	Germans	Parthians	Sarmatians	Mercenaries		

II - NEW ADDITIONS IN THIS VERSION

This rulebook is an improved version of the 2nd and 3rd editions of **ONUS! Rome vs Carthage**, which is a stand-alone but can be combined with previous games and expansions. The rules remain the same for the most part, aside from adding more detailed explanations with more examples. You must also keep a few changes in mind. If this is your first time playing **ONUS**, you don't need to read this section:

- ◆ **New abilities:** new unit abilities have been added for all sorts of terrains, really handy if you are playing with the *Terrains and Fortresses* expansion.
- ◆ **Free Rotation:** we have eliminated the possibility of rotating the units backwards, since we now have the Free Rotation option that includes it. More info in the *Special Maneuvers* section (*VII-2-b*).
- ◆ **Flight Phase:** now, fleeing units will do it using their regular movement value, instead of the reduced one. *See section VII-6.*
- ◆ **The discard option is now more beneficial.** By the end of the turn, if you didn't play an order and choose the discard option, you draw 1 additional card to the number of those discarded. *See section VII-7.*
- ◆ To simplify the calculation (*without altering the rules*), **battle modifiers** are now applied to the attack value, which added to each attack die must exceed your opponent's defense value.
- ◆ **In the forced march movement**, the modifiers if an attack is received have been simplified.
- ◆ **Elite units** now have two options instead of one to apply events. *See section XI.*
- ◆ **Skirmishers** can do a charge even if they did a ranged attack that same turn.
- ◆ **Units with the Phalanx and Wall of Shields formations** can now do a charge in the same turn they activated those formations, as long as they can reach the enemy with reduced movement.
- ◆ **The new card engine with Orders and Events** are called **Action cards**. They are slightly different and have been expanded, to better adapt to the new era of the game.
- ◆ **The size of General cards** has been increased to include larger illustrations and make it easier to read their attributes and abilities.
- ◆ **The names of generals and some units** is the same in both the English and Spanish versions, using their original names in Latin, Greek, or their own native languages, which are easier to identify for players from all over the world, and also improves the historical immersion in the era.
- ◆ **New optional rules** are included to allow the players to feel more comfortable with the game system or to increase the realism of the battle.
- ◆ **Special formations:** in chapter **VIII-Special formations** of this rulebook, it is explained that, when you reveal your units during deployment, you can put each of them in an activated special formation (*blue markers*), as you see fit.
- ◆ **Mounted units:** the name of this ability changes, and will not be "Cavalry" anymore, since it affects units on horseback as well as those riding dromedaries or elephants. *See chapter IX-Unit abilities.*
- ◆ **New game components:** which you can use with the previous games and which will be explained later on:
 - **+1/-1 Modifier:** to help you remember the modifiers of a dice roll.
 - **Army markers.**
 - **Split Movement markers:** to remember the previous movement of skirmishers before the shooting phase.

For more info and questions regarding the game, check out our website: www.dracoideas.com.

III - UNITS

As a general rule, **Unit cards** represent military formations of 80 to 100 soldiers in the case of infantry (*the equivalent of a Roman centuria*), of around 30 riders in the case of cavalry (*the equivalent of a Roman turma*) and about 6 elephants or chariots. However, depending on the scenario you are playing, they could represent larger units.

Unit card and attributes in ONUS!

A Unit has the following attributes:

- 
ATTACK: represents the unit's melee power. The first value is used for hitting and the second for damaging.
- 
RANGED ATTACK: only units with ranged capabilities have these values. The first value is the power (*both to hit and to damage*) and the second one is the **range**.
- 
DEFENSE: a unit's resistance, for both melee and ranged attacks. The first value is the ability to avoid a hit (*dodge*) and the second to prevent damage (*armor*).
- 
MORALE: represents the level of discipline and cohesion of the soldiers in a unit. Normally, failing a morale check disorganizes the unit, leaving it **BROKEN**. A broken unit that fails a second morale check **FLEES**.

HEALTH: represents the wounds that the unit can receive before being destroyed.

MOVEMENT: represents the maximum distance in DU (*1 Distance Unit = 5cm*) that a unit can move in a turn under standard conditions. Units can move up to that maximum distance.

UNIT VALUE: the points that each unit costs. It is used to select your army at the start of the battle and to determine the amount of casualties suffered.

SECTIONS: Unit cards have marks on the perimeter that divide them into 4 sections on the front and rear and 2 on each side. Said sections will allow you to know if all or part of the unit is engaged in combat with the enemy, and thus, how many dice you will roll in melee combat.

ABILITIES: they represent, by using icons, special abilities of the units. Some are triggered automatically (*in orange and green*) while other need to be activated (*blue*). They are fully listed in section IX- *Unit abilities*.

Examples of other Unit cards.

IV - GENERALS

The **General marker** represents the leader of your army, with their aids and escort. At the start of the game, you must place it on one of your units of your choice.

The General is tied to that unit's destiny: if it's eliminated, the General dies. However, there are **Action cards** that can affect the General or even allow you to transfer it to a different unit.

General card and its attributes.

The **General card** defines who leads your army, with their name, illustration and relevant historical dates, aside from the following information:

-  **MODIFIERS:** they improve the attributes of the General's unit, represented by the icon's power (*applicable for both melee and ranged attacks*), defense and morale.
-  **AREA OF INFLUENCE:** this number shows the distance in DU up to which the General's area of influence reaches. All your units within that area of influence receive a +1 morale bonus. The area is measured from any edge of the card where the General is to any part of the Unit card to which you want to apply the effect.
-  **LEADERSHIP:** determines the **starting number of Action cards**, as well as the player's hand limit at the end of the turn. There are also orders that take the **Leadership** value into account.

 **SPECIAL ABILITY:** details each General's special ability.

 **POINTS MODIFIER:** indicates the army value increase caused by the General. Add the percentage of this modifier to the army's value.

For example, an army of 1,000 points led by Trajan will increase its value by 30%, becoming worth 1,300 points (1,000 + 300). You can also reverse this process. If you are going to play a 1,000 point game and want to use Trajan, then you can do the division of $1,000/1.3 = 769$ points that you can spend in units.

 **DEAD, WOUNDED OR FLEEING GENERAL:** when any of these circumstances happen, flip the General's marker. From that moment on, all the units of your army will have -1 to all morale checks they perform. To remember this, place the indicated marker on the General's card as a reminder. Additionally, the leadership value is also reduced by -1.

The General's bonuses and abilities will no longer have any effect. If the General's unit is fleeing and recovers for any reason, these penalties will no longer apply, but a wounded or dead General cannot recover for the rest of the battle.

Other General cards.

V - ACTION CARDS

Action cards are divided in two sections. The top section includes an **ORDER** in orange and the bottom section an **EVENT** in blue.

- ◆ **ORDERS** represent command instructions to activate units or generate special effects in the active player's **Activation Phase**.
- ◆ **EVENTS** are played during the Melee or Ranged Attack phases.

Each player starts with as many cards in hand as the Leadership value of their General. You can never exceed that hand size at the end of your turn, unless an event modifies it.

ORDERS

In Ancient Times, a commander could not give a direct order to all their units. Often, they could not make themselves understood in short distances due to the noise of the fight, nor could they know what was going on everywhere at all times.

Their orders could fail to reach their destination (intercepted or disoriented messengers, unseen or unheard signals, etc.), they may have been confused and, in the same way, the officers could fail them, not understand their orders, make their own decisions (good or bad) or not make any at all.

ORDERS allow you to activate units or apply special effects at the start of your turn:

- 👤 **ACTIVATION:** it allows you to activate certain units for them to act in this turn.
- 📖 **COMMAND:** affects your General and Action cards.
- 👤 **MORALE:** affects the morale of the troops.
- ❤️ **HEALTH:** helps units to recover their casualties.

Orders must be played in the **Activation Phase** by using the cards you have in your hand. You can use as many as you want, but the same unit cannot receive more than one order in the same turn.

EVENTS

Military History is riddled with events, many of them anecdotal or fortuitous, which decided the battles: Harold II's arrow in the eye at Hastings, Napoleon's piles at Waterloo, Caesar returning a fleeing standard-bearer to the front by the scruff of the neck, or a Roman consul throwing the augural hens overboard in front of his troops.

EVENTS are generated in combat, by drawing a card from the deck.

Additionally, each player can play events from their hand during those same combats.

The icon to the right of the header indicates to whom it applies:

- 👤 **APPLIES TO THE ACTIVE PLAYER** (the attacker this turn).
- 👤 **APPLIES TO THE NON-ACTIVE PLAYER THIS TURN** (the defender this turn).
- 👤 **APPLIES ONLY TO RANGED ATTACKS.**

VI - SETTING UP THE BATTLE

In **ONUS!** the opponents define the composition of the armies and the battle conditions. Also, you will find some scenarios in the game to recreate historical battles.

The battle setup comprises the **phases** detailed below.

CREATING THE ARMIES

Before starting, the opponents must choose which army they are going to play with, as well as the size of each army, measured in points. As a general rule, both armies will have the same amount of points, but if one of the players is a beginner, you can balance the game by giving them some extra points.

If you are playing a **Historical Scenario**, follow the instructions for that scenario.

Each player chooses their General and, secretly, their units. Both players may include mercenary troops in their armies. The sum of the value of the selected units, plus the value of the General, cannot exceed the maximum army value established for the battle.

The game includes reference cards with different preset armies of **1,000** and **1,800** points for quick games.

Also, in the webpage www.dracoideas.com you will find an Excel file that will help you calculate the points of your army and the number of units of each type that you can use.

VICTORY CONDITIONS

Unless you are playing a historical scenario, the opponents will agree on victory conditions. The most common options are:

- ◆ **CASUALTIES:** all eliminated or fleeing units are considered casualties. At the start of your turn, if you have losses of more than 50% of your starting army value, you must perform a morale check for your army. If the General is dead, you fail automatically and lose the game. **Otherwise, roll 2 dice:**
 - If the result is equal to or lower than the **General's leadership**, then your army will continue fighting for one more turn. You will have to repeat this roll every turn as long as your casualties remain above 50%.
 - If the result exceeds the **General's leadership**, then you lose, your army retreats and the game ends immediately.
- ◆ **TOTAL ANHILATION OR SURRENDER:** the game will not end until one army surrenders or all their units are fleeing and/or are eliminated.
- ◆ **DEATH OF THE GENERAL:** if the General dies, the game ends immediately with the defeat of the army whose General was eliminated.

TROOP DEPLOYMENT

Once both players have the Unit cards to form their armies, have chosen a General and agreed to the victory conditions, they can deploy troops in the game area.

It is recommended to use a table as large as possible, especially for large battles or games with more than 2 players.

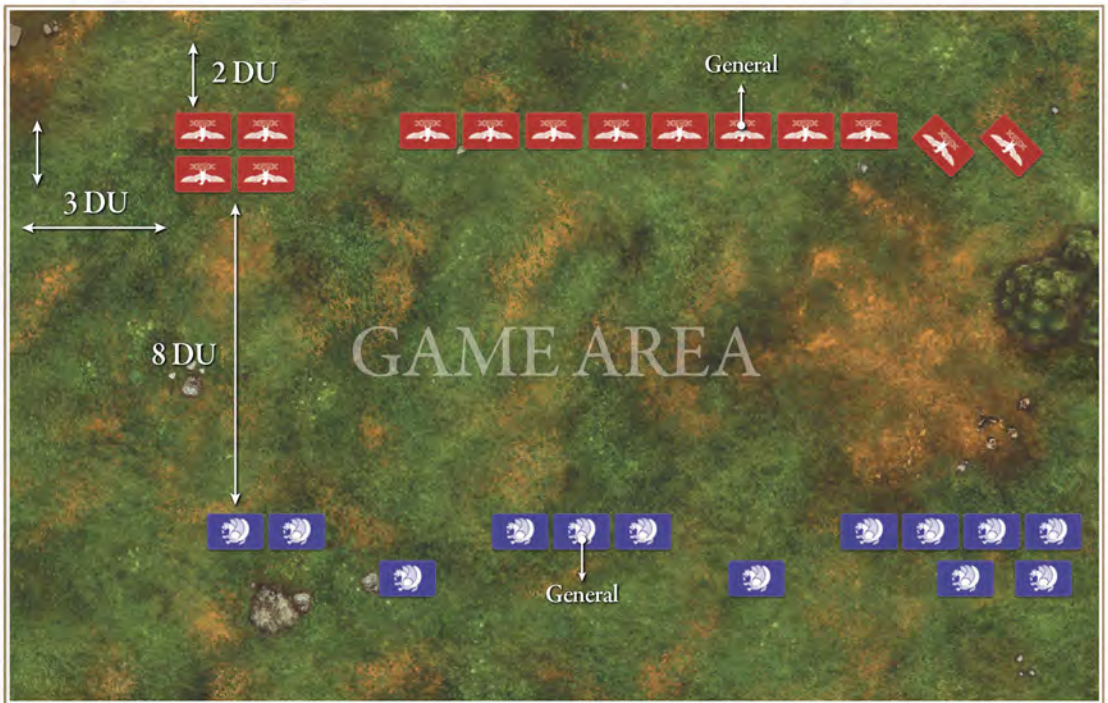

◆ **DEPTH:** it is advisable for the depth of the battlefield to be at least 70 cm. Each side will deploy their troops within the first 15 cm (the size of the measuring ruler) of its end, in such a way as to leave a central space of at least 40 cm between the two armies.

◆ **FRONT:** the width of the game area should be at least 70 cm for every 1,000 army points.

It is possible to play on a **larger mat or table**, but it is recommended to maintain these distances between armies in the initial deployment.

Starting with the player with the most **Unit cards** (*decide randomly in case of a tie*), each player will place one **Unit card** face down in their deployment area. If a player has finished deploying all their units, the other player will deploy the rest. Afterwards, the players reveal their troops. The players place **army markers** on their mercenary units, to distinguish them from those of their opponent (*in case both sides have mercenaries*).

The player who deployed the last **Unit card** places their **General** marker on one of their units, and then their opponent does the same.

In this example we have established a battle space 130cm wide and 90cm deep, so there are 40cm (8DU) between both armies, with a deployment depth of about 15cm and 10cm free behind the armies.

Finally, shuffle the **Action Card** deck and deal each player as many cards as the **Leadership** value of their Generals.

The starting player will be whoever the Historical Scenario you are going to play indicates, or whoever wins a die roll with 1 die by adding the **Leadership** value of their **General**.

VII - TURN SEQUENCE

The active player will perform each of the phases in this order, and may not play the next phase before finishing the current one.

These are the phases into which the game turn is divided:

- 1 **ACTIVATION:** as the active player, you may play as many Action cards (*from your hand*) as you wish, applying the orders located on the top section of the cards, to activate units and mark them with an **Active Unit** marker and/or applying special effects. Activated units will be the ones that can move and act for the rest of the turn.
- 2 **MOVEMENT:** you can move your active units.
- 3 **RANGED ATTACK:** active units capable of launching projectiles can do a ranged attack.
- 4 **SKIRMISHERS:** units with the skirmisher special ability can spend unused movement points from the **movement** phase. That is, you can split their movement before and after the ranged attacks.
- 5 **MELEE:** in this phase you will resolve the battles of all units engaged in combat (*both of the active units and of those already in combat in previous turns*). The active player decides the order.
- 6 **FLIGHT:** all your units that were in flight in previous turn perform a morale check. If they pass it, they reorganize and stop fleeing. If not, they continue moving towards the rear.
- 7 **END OF THE TURN:** draw Action cards. Then, check that the number of cards in your hand doesn't exceed your General's leadership, and discard any excess cards.

Once your turn is over, your opponent's turn begins, alternating between the two until the game ends.

1. ACTIVATION PHASE

VICTORY CONDITIONS: if you are playing with the option to win by casualties, now is the time to check the volume of losses of the active player. If the conditions are met, roll the dice to check the morale of the active player's army.

If they fail the roll, the active player loses and the game ends immediately. *See section "Victory Conditions".*

As the active player, you can play as many **Activation cards from your hand** as you wish. In this phase you will only take the orders into account, ignoring and losing the events of the bottom section of the cards.

For Command , Morale  and Health cards , the effect is applied immediately.

For Activation cards , activate the indicated units following the instructions on the card. Place an **Active Unit marker** on each activated unit.

Only active units can move, change formation and charge.

Active unit.

◆ UNIQUE ORDERS:

You cannot use 2 order cards on the same unit in one turn.

For example, you cannot use the order card "REINFORCE UNIT" to heal 2 wounds, and then a "SKIRMISH" card to activate that unit.

◆ NON-ACTIVE UNITS IN COMBAT:

Units engaged in combat will continue to fight in the meleé phase, without the need to activate them.

However, if they are not activated, they cannot move or change their orientation during the movement phase.

◆ ACTIVATING BROKEN UNITS:

If you activate a **broken** unit, that is not already in combat, you may then perform a morale check, with all applicable modifiers. If the unit passes it, it reorganizes and you can remove the Broken marker. Said unit will have reduced movement (*see ahead*) and cannot charge.

If you fail the morale check, or if you didn't do it, the unit remains **broken** but they can move normally.

◆ ACTIVATING FLEEING UNITS:

When you activate a unit in flight that is not in combat, immediately do a morale check, with all applicable modifiers. If you pass it, the unit recovers and the **Broken** and **Fleeing** markers can be removed. You can also change its orientation.

Then, remove the Active Unit marker, since this unit cannot move or fight this turn. There is no penalty for failing the morale check (*you can try to recover again in the Flight Phase*).

2. MOVEMENT PHASE

Active units that are not in flight can move and turn according to the movement value on their cards.

You are not required to exhaust the unit's movement value.

◆ MOVING THROUGH UNITS:

During movement a unit **CANNOT** move through enemy units, neither partially nor completely.

Friendly units **CAN** be traversed, unless the unit you are moving through is under one of the following circumstances:

- It's in an active special formation (*with a blue marker*).
The traversing unit also cannot have an active special formation.
- It's engaged in combat.
- It's an elephant unit in flight.

If the traversing unit is in a normal state, the traversed unit is unaffected. However, if the traversing unit is broken or in flight (*in case it's moving during the Flight Phase*), the traversed unit will break. Immediately place a Broken marker on it.

If the traversed unit was already broken or in flight, it will also stay unaffected.

◆ OVERLAPPING:

Unless a special rules says otherwise, no unit may end the **Movement Phase** above or under another unit, be it friend or foe.

For this reason, moving through a unit requires completion of the movement without overlapping. If this is not possible, the moving unit will have to stop before they start overlapping.

Nonetheless, if both units have been activated, they may momentarily overlap if the second unit leaves the space occupied by the first before the end of the Movement Phase, crossing paths.

2.A. TYPES OF MOVEMENT

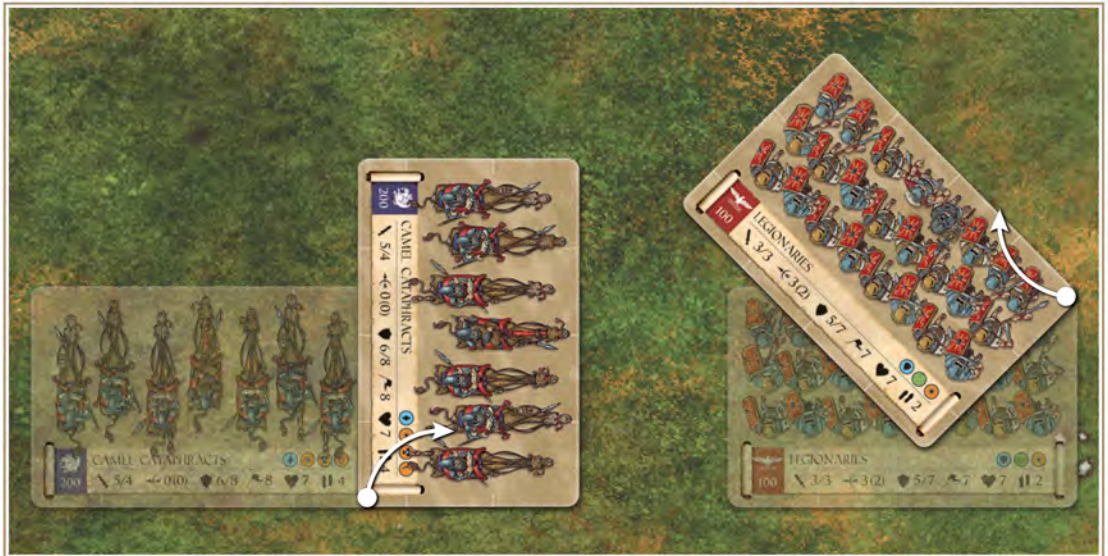

Units can perform three types of movement, each of them with their own advantages and limitations: regular movement, forced march, and reduced movement.

REGULAR MOVEMENT

It allows you to move an active unit spending up to the maximum movement points indicated on the Unit card. The unit can advance up to as many distance units (DU) as its movement points. Also, they can rotate forward up to 90°, using any of its corners as a rotation point. When you rotate a unit, the rules described for “moving through units” and “overlapping” must be followed. Each time you rotate, you spend 1 movement point (1 DU).

E.g. a unit of Funditores (113) can move up to 2 DU and rotate up to 90°, or rotate twice and move 1 DU; or move 1 DU, rotate once, and move 1 DU, etc

If you rotate several times, you must always do it to the same side, that is, rotating over the same corner and in the same direction (zigzagging is not allowed).

In this example, your unit of Camel Cataphracts (Parthians) is rotating 90° using the lower left corner as the rotation point. The Legionaries infantry unit is rotating slightly over 45° on their upper right corner. They both spent 1 DU to do this maneuver.

Units performing a regular movement can come into contact with the enemy to start a melee combat, this is called a Charge, described later on.

FORCED MARCH

An active unit can move up to double their movement points by using the forced march. You must announce this before moving and place a Marching marker on the unit when you finish its movement.

A unit with 2 movement points doing a forced march could advance 3 DU and rotate up to 90° once.

A unit performing a forced march cannot do a **Charge** nor **Ranged Attacks** during that turn. Units in special formations (*blue marker*) cannot do a forced march unless they get rid of that formation.

Units in extended formations (*see below*) can do forced marches, but morale penalties would accrue.

If a unit in a forced march is attacked, they will get a -2/-2 ♥ and -2 ♣ penalty for both melee combat and ranged attacks, as if they suffered an attack from the rear, which does not accumulate with other **flank** or **rear** penalties.

The marching unit will keep the marker and the penalty until it is activated again, at which time the marker is removed for free.

REDUCED MOVEMENT

Reduced movement applies when units perform **special maneuvers** that involve an additional time cost (*such as entering formation or performing ranged attacks*) or a particularly complex movement (*advancing in phalanx*) that causes them to move slower.

Units with reduced movement only have half of their movement points. For example, a unit with 3 DU will only have up to 1.5 DU (*fractions are accepted*).

In most cases, reduced movement will prevent the unit from charging against the enemy during the movement phase.

Units with the skirmisher special ability are an exception to this rule, as they can perform this type of special maneuver using their full movement value and even do **ranged attacks or charge**.

2.B. SPECIAL MANEUVERS

This section details all the maneuvers that cause reduced movement. Each entry includes a chart clarifying whether the unit performing the maneuver can charge or make ranged attacks that turn. Also if the maneuver can be performed by units in special formations (*blue marker*).

Finally, the exceptions to the general rule are indicated

MOVEMENT IN ALL DIRECTIONS

CHARGE	▶ NO	RANGED ATTACK	▶ YES	SPECIAL FORMATION	▶ NO
EXCEPTIONS	▶ SKIRMISHERS (regular movement)				

Any unit that is not in combat can move in any direction, even backwards, maintaining the same orientation. The unit can move in one direction, but it can also change at every step.

When doing this type of maneuver, partially or completely, it will have **reduced movement** and cannot **Charge** (*even Skirmishers*). You can combine this with other special maneuvers

You need to relocate your Parthian Cataphracts (114). With reduced movement (which drops to 2 DU), you move them backward diagonally and then once to the side. If they were skirmishers, you could use your 4 DU.

FREE ROTATION

CHARGE	▶ NO	RANGED ATTACK	▶ YES	SPECIAL FORMATION	▶ YES
EXCEPTIONS	▶ SKIRMISHERS (regular movement) ▶ DIAMOND FORMATION (regular movement, 1 free rotation per movement)				

You can rotate a unit in any direction (360°), taking the center of the card as the axis, but you will only have half your movement value (*reduced movement*), and will not be able to charge.

When rotating, the rules of “moving through units” and “overlapping” must be followed.

Units with the skirmishers special ability can do any of those rotations at the start, during or after their regular movement. In doing so, they spend 1 DU (*the same as when turning 90° in regular movement*) and will be able to charge. Another exception are the units with the “diamond” special formation, given that they can do their rotation of up to 360° at the start, during or after their regular movement and, additionally, without spending DU (*once per movement*).

Also, they can charge that turn.

MOVEMENT IN PHALANX AND WALL OF SHIELDS SPECIAL FORMATIONS

Units in a phalanx or wall of shields special formation (*blue marker*) will have reduced movement. However, they can charge normally because they are in formation.

EXTENDING OR REDUCING A FORMATION

CHARGE	▶ NO	RANGED ATTACK	▶ YES	SPECIAL FORMATION	▶ NO
EXCEPTIONS	▶ SKIRMISHERS (regular movement) ▶ MANEUVERABLE (regular movement, can charge)				

Extending a formation involves extending a unit's front line, using Enveloping markers (*white marker*). When you extend a formation, you must place a marker at one side or the other, or both sides of the front line. To reduce a formation, just remove 1 or 2 markers. Units that are engaged in combat cannot extend their formation, although they may reduce it, but they will suffer a free attack by the enemy in that section (*1 attack die per reduced section*).

Extending a formation allows the unit to envelop the enemy more easily, but makes its front line thinner. Therefore, for each extended section of the formation, its morale is reduced by 1. That is, if a unit has two extended flanks, its penalty will be -2 .

Skirmishers and Maneuverable units can extend and reduce their formation using their regular movement.

Units in a special formation cannot be extended.

Unit in a two-sided extended formation. But beware, their morale is reduced by 2.

ADOPTING OR CHANGING A SPECIAL FORMATION

CHARGE	▶ NO	RANGED ATTACK	▶ NO	SPECIAL FORMATION	▶ YES
EXCEPTIONS	▶ SKIRMISHERS (regular movement) ▶ DIAMOND FORMATION (regular movement, 1 free rotation per movement)				

Active units that are not fleeing may, at the start or the end of their reduced movement, adopt or undo a special formation (*arrow-head, wall of shields, phalanx, square, etc.*), or change to a different formation.

For this, just **add and/or remove** the corresponding blue marker. It is important to remember that units in phalanx or wall of shields formations can charge since their reduced movement is due to such formations, but they cannot do so in the same turn they adopt said formations.

Units with the **Maneuverable** ability **CAN** charge the same turn they adopt or change special formations, aside from having their regular movement.

PERFORMING A RANGED ATTACK

CHARGE	▶ NO	RANGED ATTACK	▶ YES	SPECIAL FORMATION	▶ YES
EXCEPTIONS	▶ SKIRMISHERS (regular movement) ▶ ONAGERS AND BALLISTAE (can only shoot if they don't move)				

Units that want to perform a ranged attack in the phase following their movement will have reduced movement.

When a unit capable of shooting does a regular movement, its activation marker is removed as a reminder that it cannot fire during the Ranged Attack Phase.

Skirmisher units can move normally (*even split their movement*) and then shoot. **Onagers, Ballistae and Scorpiones** can only shoot if they don't move.

COMBINING SPECIAL MANEUVERS

All special maneuvers performed in the movement phase can be combined, as long as it is done at the same time. They must be performed before or after the reduced movement.

For example, in the same turn, your unit could reduce their formation, do a free rotation, adopt a phalanx formation and then do their reduced movement (half of its movement points).

2.C. CHARGING

A charge is a movement that allows active units to come into **frontal** contact with enemy units to engage in melee combat.

With the exception of units in phalanx or wall of shields special formations, who can charge with reduced movement, a charge must always be done with regular movement. Skirmishers can perform special maneuvers during that Movement Phase, but the charge must always be frontal.

If you want, your charging unit can rotate to approach the enemy (*spending movement points as usual*), move until it contacts the enemy and then automatically (*and for free*) line up with it from the side you wish. For example, if the attacker comes into contact with the corner of the enemy card, it will line up with the defender's position on the side it wants to face.

The sections must be fully facing each other; a section that is partially in contact must be adjusted to fully face the enemy.

That is, when facing each other, if there are **2 sections** and a portion of the third section in contact, then the units are brought together so that the **3 sections** are completely united.

In case one or more sections of the front are free, you will have the opportunity to envelop the enemy, using the appropriate markers as long as there is free space to place them. The enemy will suffer penalties when attacked from the flank or rear. If a unit is in **Extended Formation**, it can also envelop using the added front sections.

*In the following example, your cavalry unit is in **Extended Formation** on its left side and charges against the infantry. When they come into contact, it faces them from the side you prefer. In this case they do it from the rear. The 2 sections are in contact with each other and both units face each other completely. Finally, you can envelop the 2 free sections on the left side of the card, and the extended section can envelop the rear. That is, in this case, you would attack 5 sections (5 dice) with bonuses for attacking the flank and rear.*

When you envelop an enemy you also prevent them from changing orientation or even moving. If you were flanking a fleeing or destroyed unit, immediately remove the Enveloping markers if the target is no longer in contact with your unit.

In this new example, your cavalry unit has extended both flanks (6 frontal sections) and charges against the infantry. Once their sections are aligned, it envelops the Roman rearguard with its extended left flank, and the right flank with the other extended flank and 2 frontal sections. That is, it will fight with 6 sections: 3 against the enemy's rear, 2 against the flank and 1 from the front, so you will have a +3 bonus to hit and damage, and your opponent will have a -3 morale penalty.

CHARGING AGAINST SEVERAL UNITS

When charging against a unit, if you are lining up both units and you “collide” with a friendly or enemy unit, the charging unit will adapt as best as possible to line up correctly.

In this case the Carthaginians adapt to the new situation, it can even envelop on its left flank, and would engage in combat with 4 sections against the unit in front, but there would be no combat with the other 2 side sections since none of the units is facing frontally.

CHARGING AGAINST ENVELOPING OR EXTENDED UNIT SECTIONS

If a unit charges against a marker of an enveloping or extended enemy unit from the rear or flank, said marker is removed and the unit automatically receives one Wound marker per marker so removed. Any section that separates from the unit after the attack is also eliminated (*also receiving a wound per removed marker*).

In this example your cavalry envelops the infantry. But another unit comes to their aid in the next turn, approaches and charges against the sections enveloping the other unit and, by doing so against a non-frontal section, the markers are immediately eliminated and the cavalry receives 2 wounds. Then, the 2 combats of both units against the cavalry are played (in the order decided by the active player).

However, if you charge head-on against a unit that has an extended front and you have front sections left, you can envelop the enemy but without eliminating its extended section, as in this example where 4 dice are rolled for the battle (for both attacker and defender).

2.D. ACTIVATION OF UNITS ENGAGED IN COMBAT

Units that are **engaged in combat** are forced to fight in the **Melee Phase**, even if they weren't activated.

However, the active player can activate their units engaged in combat to envelop, reorient or disengage in the movement phase, if they have the option to move without overlapping or passing through enemy units.

If a unit engaged in combat is activated, it can move and is not blocked, it can perform one of the actions described below, to reposition itself before the fight or to disengage.

ENVELOPING THE ENEMY

The activated non-blocked unit can envelop the enemy, provided it meets the following two conditions:

- ◆ At least two of its front sections must be in contact with the enemy. For example, if an enemy unit is attacking the activated unit from the rear, this maneuver could not be performed.
- ◆ At least one of its frontal sections and/or Enveloping markers must be free (*not engaged in combat*).

In this case, the appropriate Enveloping markers would be placed on the enemy unit, as is done when charging.

According to the previous example, your cavalry unit receives a charge from the infantry. Both units roll 4 dice in combat. If the cavalry is activated in the next turn, it could envelop with its 3 remaining frontal sections (2 from the card and 1 from the extended section), enveloping the infantry in turn. In this case, both units would roll 7 combat dice.

REDUCING AN EXTENDED UNIT

You may also activate units to reduce extended units or to remove Enveloping markers. If the removed Extended marker is not "engaged" in combat, there is no penalty. However, if the unit or the Enveloping markers are, it would receive an attack with 1 die for every removed marker, caused by the enemy unit with which they are in contact. These attacks are resolved immediately, without playing event cards (*explained later on*). However, any damage caused does not count in determining a potential morale check in the following Melee Phase.

A unit engaged in combat cannot extend its formation. Nor can it adopt a special formation, or undo the special formations "wall of shields" or "square", to return it to a standard formation. Remember that phalanx and arrowhead formations are undone automatically after the first combat.

REPOSITIONING A UNIT ENGAGED IN COMBAT

This represents that the unit's soldiers move during the battle to find a more beneficial position. There are two types of repositioning: 90° and 180° repositioning.

90° REPOSITIONING:

A 90° repositioning represents the way that a unit changes shape in the heat of battle, under the command of a capable leader. The unit must have free space to perform this maneuver. To reposition the unit, you can reorient the card 90° from its original position, provided the following two conditions are met:

- ◆ Your unit must keep the same frontal sections in contact with the enemy unit as it had before this maneuver (*including Enveloping markers*). It's likely that the repositioning unit needs to place new Enveloping markers when doing this. You cannot eliminate or add Enveloping markers for the enemy unit.
- ◆ The repositioned unit cannot overlap units or Enveloping markers.

In this example, you reposition your left unit 90°. Then, 3 Enveloping markers must be added to maintain the same contact points.

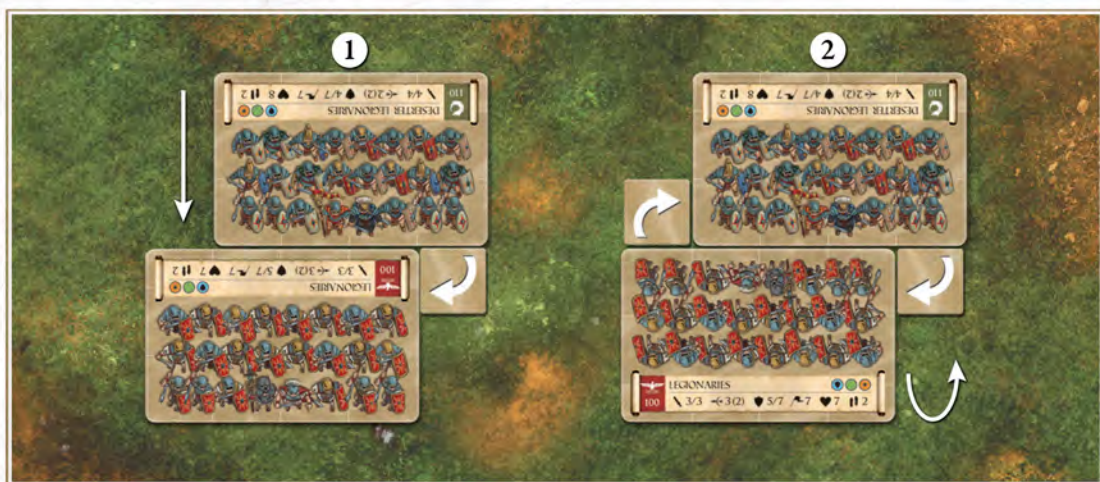

In this other example, the unit on the right is in a very unfavorable position, with two rear sections under attack, so you decide to activate the unit and rotate it 90°, facing the enemy head-on. You also take the chance to envelop it, since you have enough space to perform this maneuver. You will both fight with 6 dice.

180° REPOSITIONING:

A 180° repositioning means that you would leave the card in the same position but change its orientation. If you do this, remove any Enveloping markers of the repositioned unit that are engaged with an enemy unit, with the active player's unit suffering an attack with 1 die for every removed marker. If the repositioning unit is engaged with enemy Enveloping markers, the markers remain where they are.

Once a 90° or 180° repositioning has been performed, the repositioned unit can envelop, if the above conditions are met.

In this example, the unit on top attacks the enemy from the rear (1). In their own turn, to prevent the penalty, your opponent activates its unit and repositions it 180°. Your Enveloping marker remains in place, but after the rotation, your opponent decides to envelop in turn.

WITHDRAWAL

An activated unit that is engaged frontally in combat can make an orderly withdrawal movement. In this case, they will move half of their movement points in the opposite direction to the enemy, without rotations and without turning their back. The following conditions must be met to perform a withdrawal:

- ◆ The **activated withdrawing unit** must be facing the enemy and its front section must be in contact with the enemy unit (*or units*).

Withdrawal, unlike retreat, does not generate any attack of opportunity from the enemy from whom your unit "detaches".

When a unit withdraws, your rival has two options (*or rivals if your unit is in contact with more than one unit*):

- ◆ **Hold the position:** the opposing unit does not move and the Enveloping markers of both units are removed without further consequences and, even if either of them had an extended formation, they would revert to a standard formation. The unit is no longer engaged in combat.
- ◆ **Maintain contact:** the opposing unit moves, "chasing" the withdrawing unit and maintaining the same facing, unless the opposing unit is engaged with another enemy. Enveloping markers from the pursuing unit are also maintained. Both units would remain engaged in combat in the new position and combat would ensue.

If the opponent wants to maintain contact, but their maximum movement is lower than the path of the withdrawing unit, then they may place their unit at that maximum distance, but without being able to maintain contact.

For example, a cavalry unit with 5 movement points decides to withdraw, so it moves back 2.5 DU. If its opponent is a unit that moves 2 DU, it would follow it when withdrawing, but would remain 0.5 DU away.

In this example the Roman withdraws and maintains their formation. The enemy can decide to hold their position or maintain contact. If they stay where they are, the enveloping section should be removed, but they can keep it if decide to chase it.

Skirmishers do not need to make this type of maneuver, as they can withdraw without movement penalty or attack of opportunity, they can withdraw their full movement value without penalty (*as long as they are not blocked*).

In this case, it would be a regular movement, not a withdrawal, so the opponent cannot maintain contact.

RETREAT

An activated unblocked unit can decide to retreat from a battle. The player announces their intention to retreat and the unit immediately receives an undisputed attack (*with as many dice as the number of sections that the enemy has in contact with the retreating unit*), and with no events.

Subsequently, if the unit has not fled, any Enveloping markers are removed, and the unit is now considered to be disengaged: it can move, rotate, etc. Although, if it moves backwards it will have reduced movement, unless they are Skirmishers.

If the unit was in combat with two enemy units, it will suffer an attack of opportunity from both units.

Skirmisher units can retreat with no attack of opportunity.

3. RANGED ATTACK PHASE

Ranged attacks allow you to shoot projectiles with different weapons (*javelins, bows, slings...*) against other units, as indicated by the ranged attack values printed in their cards, higher than 0.

For example, the archers have a ranged attack value of 3 (8), meaning that their attack value (to both hit and damage) is 3 and their maximum range is 8 DU.

In order for this type of unit to be able to make a ranged attack, the following conditions must be met:

- ◆ Neither the shooting unit nor the target unit can be engaged in melee combat, unless a card states otherwise.
- ◆ The target unit cannot be farther than the maximum range of the shooting unit.
- ◆ The shooting unit cannot have moved or has only done reduced movement this turn. The only exception are skirmishers, who can shoot after doing a regular movement.

These rules can vary when using certain **order/event cards**.

The Ballistae, the Onager, and the Scorpion are an exception: they cannot perform a ranged attack if they moved at all.

PROCEDURE

A ranged attack must always follow this sequence:

- ① **TARGET:** the attacker indicates which unit will shoot and which enemy unit is targeted.
- ② **RANGE:** measure the distance and line of sight between both units.
- ③ **EVENT:** reveal an event card from the deck (*random event*). First the attacker and then the defender can play an additional event card from their hands.
- ④ **DICE:** the attacker rolls 2 dice (*long range*) or 4 dice (*short range*), and the resulting wounds are applied.
- ⑤ **DAMAGE:** if the target unit suffers at least as many wounds as its remaining health points, it is eliminated and removed from the game. If the total wounds inflicted are lower than that number, the defender must do a morale check.
- ⑥ **FLIGHT:** if the defender begins to “flee” as a result of the morale check, the fleeing movement is done immediately.

This sequence is explained in further detail below:

RANGE

You must specify which unit is attacking and what the target is, without prior measurement. Next, determine the range using the measuring ruler, from the center of the attacking unit's front section to any part of the target unit (*including its Extended markers*). If the target unit is closer than the attacker's range, the attack can be made.

Otherwise, the attack is lost and that unit cannot fire at another unit. If the distance is lower than half of the attacking unit's range, it is considered a **short-range attack**.

LINE OF SIGHT (LOS)

The **line of sight** is established from the front half of the attacking unit, within a **180 degree** angle from its front, to any part of the enemy unit. The **line of sight** will be blocked if it goes through any friendly or enemy unit. In this case, the ranged attack rolls to hit and damage will have a **-1/-1** penalty (*regardless of the number of obstacles in the line of sight*).

In this example, the archers can shoot at any Roman unit except the one to the left (a) and the one engaged in combat to the right (d). Also, when attacking the unit from the top right (c), since the line of sight is not clear, they would suffer a penalty when shooting. If the archer unit does a side movement to the left (Reduced Movement), they could see the Roman unit (a).

EVENTS

After verifying the range, play a **random** event by drawing the top card from the Action card deck. Then, the **attacker** may play one (*and only one*) event card from their hand, revealing it. After that, the defender can also play one event from their hand. The events are then applied, when possible, giving priority to those that cancel the combat or other events. Events applicable to ranged attacks are those that have a bow icon and some of those with a shield icon. The description of the event details if it's applicable to this type of attack.

Depending on the nature of the random event, it will affect the attacker, the defender, both or neither. However, events played by players will be applied in their benefit, as long as the requirements of the card are met and it affects ranged attacks. Duplicate events cannot be played in a single attack.

COMBAT RESOLUTION

The attacker rolls 2 dice for long-range attacks and 4 dice for short-range attacks. Only the attacker deals damage in ranged attacks. A unit is at short range if the distance between it and the attacker is half or less of its maximum shooting range.

Combat is divided in two phases:

- ◆ **HIT:** first the attacker rolls the dice (2 or 4) and adds its attack value and all applicable modifiers to each of them. Each die that exceeds the opponent's first defense value (*dodge*) is considered a hit. If none of the dice hit, the attack ends here without consequences.
- ◆ **DAMAGE:** the attacker re-rolls using only the dice that hit. Add to each of them the attack value and any applicable modifiers. Each die that exceeds the opponent's second defense value (*armor*) inflicts a wound. Place as many Wound markers on the unit as the number of wounds inflicted.

In the final section you will find an Important Rules Summary, with all modifiers that apply in combat and morale checks.

There are 2 special die roll results in combat resolution that do not require these calculations:

- ◆ **CRITICAL:** rolling a 6 on the die will always be a hit on the first hit roll, or a wound in the case of damage rolls.
- ◆ **FAILURE:** if you roll a 1, it is considered an automatic failure, both to hit or damage. Units with the professional special ability may re-roll once each time they roll a 1 (*once per die*).

CONSEQUENCES

- ◆ **NO CASUALTIES:** no wounds were caused. Nothing happens.
- ◆ **ELIMINATION:** if the number of accumulated wounds equals or exceeds the health value of the defending unit, that unit is eliminated and removed from the game.
- ◆ **MORALE CHECK:** if the unit received wounds in the attack and is still alive, it must do a morale check. Roll a die and apply the appropriate modifiers. If the resulting number exceeds the unit's morale, the morale check has failed and the unit is broken (*a Broken marker is placed*). If the unit is already broken, it is set to "fleeing" (*and a marker is added*).

A roll of 1 on a morale check is always considered a success.

You use your archers [bow] 3/(8) to attack a Roman unit [shield] 5/8 at a distance of 3.5 DU. However, the line of sight is obstructed by another one of your units, so you suffer a -1/-1 penalty. Since it's a short-range attack, you roll 4 dice. On the hit roll you get 1, 2, 4 and 5. The 1 is a failure. Only those rolls that by adding 2 (+3 attack and -1 for the obstructed line) exceed the defense of 5 will be hits. In this case, your 4 and 5. Then you roll the damage roll and realize that it is not possible, because you need to exceed an 8 after adding 2. You roll the dice and get 5 and 6. Luckily, you will inflict a wound since a 6 is a Critical, and always succeeds. Since the Roman was wounded, they must do a morale check.

FLIGHT MOVEMENT: in case a unit is **Broken** and fails the morale check, the unit **Flees** and such movement takes place immediately. Fleeing units move towards their rear line. When necessary, start by rotating the unit in that direction.

(Note: check the melee combat section for more details).

MODIFIERS FOR FLANK AND REAR ATTACKS: if a unit receives a ranged attack from the flank, it suffers a +1 \leftarrow defense penalty and a -1 \rightarrow penalty, and a +2 \leftarrow defense and -2 \rightarrow penalty if the attack comes from the rear, or when marching or fleeing. Therefore, you must determine which side the projectiles are coming from by drawing a line from the **center** of the attacking unit to the nearest point on the defender's card. If the **nearest** point is a corner of the target card, then the attack comes from the nearest side and, if both sides are at the same distance, the defender decides.

In this example, the closest point of the Roman unit to the center of the archers' front is one side. Therefore, it is a flank attack with a defense penalty of +1 \leftarrow and a morale penalty of -1 \rightarrow .

4. SKIRMISHERS PHASE

Skirmishers who were activated during the turn and who did not exhaust all their movement points in the Movement Phase can move as many **DU** as movement points they have left, and even charge to initiate a melee combat.

Round up the remaining movement points of the skirmishers to **DU** or **0.5 DU**.

As a reminder, you can use the Split Movement markers to mark every 1 **DU** or 1/2 **DU** that the skirmisher unit has moved during the movement phase. By doing this, you can remember how many **DU** you have available for this phase. Remove the markers once this phase is over.

*For example, if a Skirmisher unit with a movement value of 3 \blacksquare moves 1.2 **DU** in the movement phase, place Split Movement markers for 1.5 **DU** in total, and the unit may move up to those 1.5 **DU** in the Skirmishers Phase.*

5. MELEE PHASE

All melee combats take place in this phase, both those that started after a charge in that same turn, and those of units that were engaged in combat from previous turns.

The active player decides in which order the fights are resolved, and is always considered the attacker, even when a fight was initiated by an opponent.

Melee combat is only between two units. If a unit is engaged in combat with two or more enemies, it will fight each of them individually, one after the other.

SEQUENCE

Standard or simultaneous melee combat follows this sequence:

- 1 **EVENTS:** draw and resolve events.
- 2 **DICE:** determine how many dice to roll. The attacker rolls the dice, first to hit and then to damage. Calculate the amount of damage inflicted and then the defender repeats the process. If neither unit managed to inflict damage, the sequence ends here.
- 3 **DAMAGE:** the damage to both units is applied simultaneously (*with some exceptions*). If one unit (*or both*) receives as many or more wounds than its health value, the unit is eliminated and the sequence ends here.
- 4 **MORALE CHECK:** the unit that received more wounds in this combat will do a morale check. If both units received the same amount of wounds, both make the check. A unit that fails the morale check will be broken. If it was already broken, it flees.
- 5 **FLIGHT:** if a unit flees, the flight movement is done immediately. If both units are in flight, the active player flees first. If neither unit is eliminated or flees, the units remain in combat for the next turn.

COMBAT DEVELOPMENT

Melee combat has many similarities with ranged attacks, so this section will only explain the specifics of melee combat.

EVENTS

- ◆ **PLAY EVENT CARDS:** the procedure is similar to that of ranged attacks. After playing a random event, the attacker may play an event from their hand and, after viewing the previous events, the defender can also play an event from their hand. In those particular cases in which combat is not initiated in the melee phase (*movement after removal of Enveloping markers, flight movements, movement of elephants*), no events are played.
- ◆ **EVENT OWNERSHIP:** if the random event shows a sword icon, the event benefits the attacker's dice roll. If it shows a shield icon, it benefits the defender. If it shows both icons, it applies to both. Events played by each player from their hands always benefit the player who plays it, regardless of the icons on the card, unless the event specifies otherwise.

For example, if the event "Resist" with a shield icon (which gives +1/+1 ♠ ♣ +2 ♠) appears as a random event, it will only favor the defending player. But, if you play it from your hand during the attack, it will favor you when the defender rolls their dice. If the "Throw Javelins" event (with a ♠ and ♣) appears as the random event and both units have javelins, both players will benefit. But if you play it from your hand, only you will benefit from this special attack even if both units have javelins.

◆ **TYPES OF MELEE COMBAT:** there are three types of melee combat, according to moment in which they are resolved:

- **Simultaneous:** it's the standard combat. Wounds inflicted after dice rolls are applied to the attacker and defender at the same time, once both have rolled their dice. The morale check will be made by the unit that has received more wounds in that combat (*no matter how many it had before*) and in case of a tie, both.
- **Attack Priority:** various special formations, events and terrain advantages will give attack "priority" to a unit. The priority unit will attack first, even if it is the defender. In attack priority combat, after the events are resolved, the priority unit makes the attack and applies the wounds inflicted. If damage occurs, the affected unit must pass a morale check. If the unit is still alive and doesn't flee after the attack, it will then make its attack against the priority unit, applying any penalties generated by the first attack.

The wounds inflicted are compared and, if necessary, morale checks will be made. This way, the non-priority unit may have to pass two morale check in a single combat.

- **Single:** the special ability "sarissas" allows a unit to perform an attack, in their first combat after engaging when the phalanx formation is active, without receiving an attack from its opponent. If a unit with attack priority fights against a unit with single attack, a priority combat occurs (*but it will be the unit with single attack that acts as the priority unit*).

DICE

For melee combat, count all frontal sections (*both of the card and Enveloping markers*) of the attacker in contact with those of the defender. Roll a die for each section, and both attacker and defender will always roll the same number of dice.

In this example, the Parthian unit charges with extended formation against the Roman unit, and then envelops it with its 2 free frontal sections. There are 6 sections in contact with the enemy. As all sections of the Romans are in contact with the frontal sections of the Parthians, both will roll 6 dice for close combat.

DAMAGE

As with ranged attacks, first roll the dice to hit, and with those that succeed a second roll is made to damage. Unlike ranged attacks, the attack values of each unit to hit and damage can be different. Rolling a Critical  is still an automatic success, and rolling a Failure  is an automatic failure. The attacker rolls first and then the defender, both with the same number of dice. Place as many Wound markers on each unit as the amount of damage received.

Following the previous example, as the attackers, first the Parthians roll 6 dice. As they are enveloping from one flank, your Parthian unit has +1 for the roll. Their hit value is 5 (+1) and the Romans' dodge value is 4. After rolling, you get only 1 Failure with one die, and the other 5 are hits. The damage value of the Parthian unit is 4 (+1) and the defense value of the Romans is 7, so you need to roll 3 or more to damage, and thus inflict wounds. You roll 5 dice (the ones that hit) and do 4 wounds. Then, the Roman does the same and inflicts 3 wounds. Place a III (3) Wound marker on the Parthian unit, and a III (3) and a I (1) Wound markers on the Romans.

Wound markers represent the casualties suffered by the unit: killed, wounded or missing. If a unit has as many Wound markers or more than its health value, the unit is eliminated and removed from the game. It's possible for both units to be eliminated in the same combat.

- ◆ **WOUND CONTROL:** to keep track of the wounds inflicted in that combat, it is advisable to leave any old Wound markers in the center of the Unit card, and place the new ones inflicted in that combat on the edge of the card.
- ◆ **WOUND MODIFIERS:** the accumulation of wounds affects the unit's capacity. Each wound decreases the unit's morale by 1. In addition, for every 3 wounds the unit will suffer a -1/-1 penalty to melee and/or ranged attack rolls. However, the minimum attack value of a unit will always be 1/1, regardless of the number of wounds inflicted and other modifiers.

These mercenaries have three wounds. As a consequence, their attack power is 2/2 and their morale is 5.

- ◆ **MORALE CHECK:** if both units survived, the unit that received more wounds in the previous combat (not in total) will have to pass a morale check. In case of a tie, both units will have to make the morale check and, if neither received wounds, no one makes the check. As with ranged attacks, a die is rolled to make the morale check. If you roll , it's an automatic success. If not, apply the modifiers and if the result is higher than the unit's morale, the check fails.

Following the example, since the Romans suffered more wounds, they must pass a morale check. Their morale is 8, but they have -1 for being attacked from the flank and -4 for their 4 wounds, resulting in 3. The die rolls a 4, so morale fails (narrowly) and the unit is broken.

BROKEN UNIT: units break when they fail their morale checks. Some game circumstances may also break a unit. When this occurs, place a **Broken marker** on the unit, resulting in a **-1/-1** penalty to attacks and **-1** morale.

FLIGHT IN COMBAT

- ◆ **FLEEING UNIT:** if a broken unit fails its morale check, then it flees. Immediately remove any Special Formation (*blue*) or Enveloping markers and place a Fleeing marker instead. Also remove any Enveloping markers of the enemy. If the fleeing unit is blocked, don't remove the enemy's Enveloping markers (*but your own*) and the melee combat continues until the fleeing unit can move.

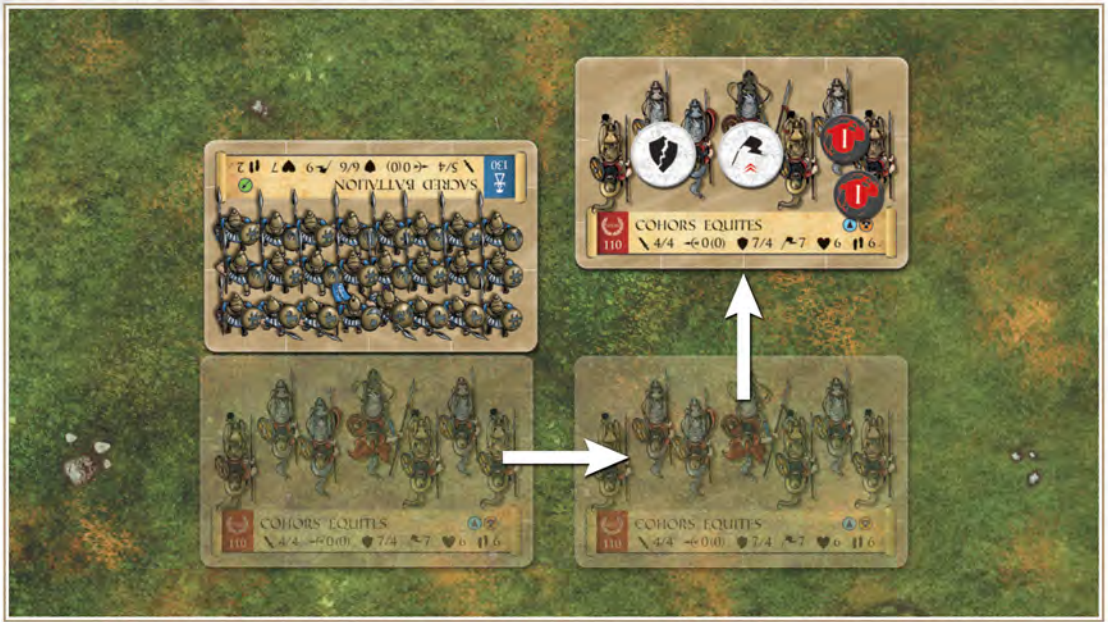

If unblocked in that same turn, after resolving another combat, the unit immediately flees. When it occurs in a different turn, the movement takes place in the Flight Phase.

- ◆ **INITIAL FLIGHT MOVEMENT:** this movement takes place as soon as the combat that originated it ends, during the Melee Phase. The fleeing unit can use its full movement value and can turn and rotate as many times as it needs to break off from the attacking unit, and move towards its own lines following the most direct path.

In its flight, it will inevitably cross any of the friendly units that are in its path and are not in special formation. In doing so, those units will break.

In 1, your Roman cavalry unit resolves the combat against a Parthian unit. Your unit takes 3 wounds and none for the Parthian. You do a morale check (-1 for being broken, -1 for being flanked, and -3 for the inflicted wounds) and fail. In 2 you can see the flight movement: You reposition 180° to your rear and advance, moving through a friendly unit, which breaks in turn.

In this case, your cavalry unit has been put to flight after fighting the Parthian infantry, who stand in your way to flee to your own Roman lines, so you make a lateral move to break off (2 DU) and then keep moving directly to your rear (another 2 DU), similar to a skirmisher unit.

- ◆ **VOLUNTARY FLIGHT:** after a melee or ranged attack in which your unit has suffered at least one wound, you can choose to flee voluntarily. Place a Fleeing marker on your unit and start its initial flight movement. From that point on, it is considered “in flight” and suffers the same conditions as any units that are forced to flee.
- ◆ **BALLISTAE, ONAGER, & SCORPIONES:** they are considered siege and artillery weapons, and can be used in open field combat, but they cannot flee and are instead destroyed.

6. FLIGHT PHASE

Fleeing units do not move in the Movement Phase, cannot execute special or extended formations, cannot shoot and, unless they are blocked in combat or suffer an attack, will not fight in the Melee Phase.

They can be activated to try to recover them in the **Activation Phase**. If a fleeing unit leaves the board partially or completely, it is considered eliminated.

- ◆ **ATTACKING A FLEEING UNIT:** a fleeing unit that suffers an attack will act as a regular unit, but will not have to make morale checks since it is already in flight.
- ◆ **PHASES:** in the order decided by the active player, perform the following two actions for each fleeing unit, activated or not, that has not started fleeing that same turn:
 - ① Perform a morale check to see if the unit recovers.
 - ② If it fails, the unit continues its flight movement to the rear.

- ◆ **RECOVERING A FLEEING UNIT:** make a morale check for the unit (*with all applicable modifiers*) to try to stop it from fleeing. If successful, the unit stays where it is, but facing where you want it to face. Remove the Fleeing and Broken markers, but Wounds and any other markers remain.

Fleeing units that are engaged in combat and blocked will also make a morale check. If successful, they won't move or change their orientation, but you can remove the Fleeing and Broken markers.

- ◆ **FLIGHT MOVEMENT:** the units that have not recovered will continue with their flight movement. Fleeing units use their full movement value to move, may turn and perform any necessary maneuvers (*like a unit of skirmishers*) to take the shortest route to their rear line.
- ◆ **OBSTACLES TO FLEEING:** a fleeing unit cannot move through enemy units (*regardless of their status*), nor friendly units in special formations (*with a blue marker*), nor fleeing elephants (*see below*). In these cases, the fleeing unit must rotate as many times as necessary to avoid such obstacles, always taking the shortest route to its line of deployment.

However, if there are friendly units on the shortest route, the fleeing unit moves through them as usual, as long as its movement does not end up overlapping with the friendly unit. In this case, the fleeing unit will have to stop their movement right before making contact. They can resume their movement in the next Flight Phase (*and eventually move through the friendly unit if it didn't move or adopted a special formation*).

A unit is considered to move through another even if there is only one overlapping corner, i.e., it does not have to cross it from side to side. Friendly units that are moved through are “**broken**”. However, if the friendly unit is already broken or is also fleeing, there is no additional effect.

- ◆ **FLEEING ELEPHANTS:** elephants are powerful weapons of war, but can be uncontrollable in tense situations, inflicting damage on friend and foe alike.

Like any other unit, unblocked fleeing elephants can turn and make the necessary movements to face their rear line. Then, they will move in a straight line towards it.

- ◆ **ELEPHANT TRAMPLING:** on their way, elephants will not deviate and will trample any units they move through, regardless of their army and formation. To trample, the elephant must move completely through the unit. If this is not possible, they must stop their movement just before making contact. When trampling, the elephants make an attack, without events, rolling as many dice as the number of own sections traversing the enemy unit and applying the corresponding effects.

The trampled unit does not attack back. If the trampled unit “**flees**” as a result of being trampled, it will immediately perform its flight movement, once the elephants' movement is completed. If the unit is still operational after the end of the combat, place on it a Broken marker. If it was already broken (*or fleeing*), nothing else happens.

For example: Your unit of Balearic Slingers is trampled, after being crossed by an elephant unit with three sections, rolling 3 dice and inflicting 2 wounds. The slingers roll the dice for a morale check and fail it, leaving the unit broken. If the unit did not fail the morale check, it would still be broken by the fact that it had been trampled

On subsequent morale checks to recover the elephant unit, if the result exactly matches the morale of the animals (*with any appropriate modifiers*), but is neither higher nor lower, you can decide whether the drivers kill the elephants to avoid further damage, in which case the unit is eliminated.

In those days, elephant drivers carried a hammer and chisel to kill their animals in case they became too dangerous for friendly troops.

- ◆ **COMBAT WITH FLEEING ELEPHANTS:** the unit to be trampled (*friendly or enemy*) may choose to engage the elephants in combat. In this case, the elephants will face them (*with no option to envelop*) and a standard combat takes place, only without events. If the units are still alive after resolving the fight and the defenders did not flee, they remain engaged in combat. Then, if the defending unit flees, retreats or is eliminated, the elephants will continue to flee if they have not recovered.

7. END OF TURN PHASE

The active player's turn ends with this phase.

- ◆ **TURN PLAYING ORDERS:** if the active player has played at least one order during the turn, they draw 1 card.
- ◆ **TURN WITHOUT PLAYING ORDERS:** if the active player did not play orders (even if they played events), they must choose one of the following actions:
 - **DISCARD:** the active player can discard cards if they want to, and draw the same number of cards plus 1.
 - **DRAW:** the active player draws 3 cards.

Then, if the number of cards in their hand exceeds the General's leadership value, the player must discard any excess cards.

END OF THE DECK: if the deck of cards is exhausted, shuffle the discard pile and turn it face down to form a new deck. Keep in mind that this could trigger the end of the game in some scenarios.

Front and back of the help card.

VIII - SPECIAL FORMATIONS

Some units have a **round blue icon** on their cards representing special formations they can adopt.

To **activate a special formation**, a unit with that capability can do so in the Movement Phase if it meets the following requirements:

- ◆ It must have been activated.
- ◆ It will have reduced movement in the movement phase in which the special formation is activated or deactivated.
- ◆ It cannot be engaged in melee combat.

Once activated, place the appropriate **blue marker** on the unit. No unit may have more than one active special formation (*only one blue marker per unit*).

The benefits provided by special formations are in addition to those of special abilities (orange and green icons).

Unless a historical scenario specifies otherwise, the players can choose to start the game with units in active special formations, after revealing the unit during deployment and placing the appropriate marker.

Below is a description of the peculiarities of special formations:

WALL OF SHIELDS: is a defensive formation in which the ranks are closed and large shields are used.

- Adds +1/+1♥ to defense against ranged attacks and for melee combat.
- Units with this formation active will have reduced movement.

PHALANX: is a formation in which the unit forms in compact ranks lining up its spears. This formation is especially common in ONUS: Rome vs. Carthage and its expansion Greeks and Persians.

- The phalanx adds +1/+1 to the attack value against any enemy.
- The first time it enters combat, attacking or defending, the unit in phalanx formation will have attack priority (*it attacks first, even if it's the defender, and will inflict damage first*).
- After this first combat, the phalanx formation is lost and ceases to have any effect. Remove the blue marker.
- The unit will have reduced movement while this formation is active.

If a **Phalanx** unit engages another unit with attack priority (*e.g., being charged by cavalry with that special ability*), both effects cancel each other out and the combat is resolved normally (*simultaneously*).

The German Spearmen unit charges against your phalanx. However, your Roman Legionaries have attack priority, so they always roll first even if they are the defenders. If any wounds are inflicted, the German unit must pass a morale check before rolling its dice.

SQUARE: this defensive formation consists of keeping the wounded in the center and forming a square with all weapons pointing outward.

- There are no penalties when attacked from the flanks or rear.
- A square formation gives a +2/+2♥ defense bonus against cavalry.
- It has a -1/-1♥ defense penalty against ranged attacks.
- The unit cannot move while this formation is active.

ARROWHEAD: characteristic formation of some cavalry units that increases the power of their charge.

- +1/+1♠ attack bonus, only applicable when the unit charges.
- Once the combat ends after the charge, the formation is lost and ceases to have any effect. Remove the blue marker.
- It can be activated during a regular movement.

DIAMOND: this cavalry formation has the same characteristics as an arrowhead formation, but with the added advantage that, once per turn, the unit can rotate up to 360° on its axis without spending movement points.

BRAVERY: represents the drive of the unit to increase its strength to the detriment of its defense. It is a special ability, different from the previous ones, as it is not exactly a formation and, therefore, has some exceptions to the general rules.

- When active, attack is increased by +1/+1♠ but defense is reduced by -1/-1♥.
- Both to activate or deactivate this ability, it is enough to activate the unit and place or remove the marker, without reduced movement in that turn.
- It is compatible with other formations (e.g., you can activate bravery and phalanx).

IX - UNIT ABILITIES

They represent the **special abilities** of the different units. Unlike formations, they do not require activation, so their effect is permanent. They are represented by **orange icons** for general abilities, or green icons for special weapons (*javelins and spears*). The benefits and bonuses they provide are cumulative. **These are the abilities:**

ABILITIES ON TYPES OF TERRAIN

SYLVAN: is an ability specific to units accustomed to moving in forest terrain. The unit is not affected by any penalties related to movement, positioning or combat in forests.

MOUNTAINEERS: is an ability specific to units accustomed to moving in mountain or particularly rough terrains. The unit is not affected by any penalties related to movement, positioning or combat in sloping or mountainous terrain.

AMPHIBIOUS: is an ability specific to units accustomed to or especially trained to move through rivers and lakes. The unit suffers no movement penalties when entering, moving or exiting the water, nor in combat when exiting the water (*but it does suffer penalties if it stays in the water*).

OTHER ABILITIES

ATHLETES: units in excellent physical condition:

- They can move 1 extra DU when they charge against an enemy.

LUNGE: is a specific ability of certain mounted units and a few infantry units:

- It only applies when charging against infantry units, and only during the first attack of the charge.
- Gives +1/+1 $\frac{1}{2}$ attack.
- The lunging unit will have **attack priority** (*attacks and inflicts damage first*).
- If the defender flees or is eliminated after a lunge, the attacking unit can do an additional move with half its movement value, but it cannot charge again.

If a unit lunges against an infantry unit with **attack priority** (*e.g., a phalanx*), both effects cancel each other out and the combat is resolved normally (*simultaneously*).

SKIRMISHERS: are units that operate in very flexible formations, fast and able to move in the terrain without maintaining a rigid line, but without ever separating too much to maintain the cohesion of the unit.

- They can perform the special maneuvers detailed in the Movement Phase (*movement in all directions, free rotation, etc.*) and shoot with normal movement instead of reduced movement.
- They can split their movement between the phases before and after ranged attacks, so they can move, shoot and move again until their movement points are depleted. It is advisable to use the Split Movement markers that allow you to remember how much the unit has moved before shooting.
- They can retreat from combat without suffering attacks of opportunity.

MANEUVERABLE: is an ability that certain mounted units have to quickly perform special maneuvers:

- They can change formation (*e.g., extend, reduce, or adopt another formation*) and use their regular movement that turn.
- They can charge in the turn when they adopt or change formation.

PROFESSIONALS: well-trained units that rarely make mistakes in battle:

- When they roll the dice to hit or damage in ranged attacks or melee combat, they may re-roll once for each die that rolled a 1 (*Failure*).

FEAR: represents the fear that certain units cause to their enemies.

- Units fighting in close combat with such units will suffer a -1 penalty on all their morale checks, even if they were not damaged that turn.

MOUNTED UNITS: it is not an ability per se (*it has no icon*) but an inherent advantage to all mounted units when fighting against infantry:

- It only applies in favor of mounted units fighting against infantry.
- If they attack from the flank or rear, the chances of hitting improve (+1/0\ to flank attacks and +2/0\ to rear attacks). All attacking sections will benefit from the highest modifier. For example, if a cavalry unit envelops an infantry unit with 1 frontal section, 2 flanking sections and 1 rear section, all dice will have a +2/0 bonus.

STEADFAST: units with unbreakable morale.

- They may break, but they will never flee unless the player handling them wants them to. They can hold out to the last man.

BRASH: represent battle-hardened but undisciplined units:

- During the Movement Phase, the active player's brash units will automatically charge (*whether activated or not*) against any enemy within charging distance.
- If there is more than one enemy within charging distance, the owner of the brash unit decides.
- This ability does not apply against units that are inside structures.

JAVELINS: these are short spears that were thrown before engaging in melee combat (*like the Roman pilum*). Units with this ability can benefit from the "*Throw Javelins*" event, whether played in attack or defense.

SPEARMEN: these are units with long spears, and very effective against mounted units.

- They get +1/+1\ in melee attacks against cavalry and other mounted units.

DEADLY: particularly aggressive units that are deadly in close combat.

- In any melee combat, on the damage roll, "*deadly*" units inflict 2 wounds for each die on which they roll a 6 (*Critical*).

ACCURACY: units with a great aim in attacking from a distance.

- It only applies to units that did not move that turn.
- Each 6 obtained in the damage roll inflicts double damage.

Your unit with the accuracy ability doesn't move and shoots in the ranged attack phase. It rolls the dice and gets 3 hits. After rolling damage, it rolls 6, 1, 6, so it inflicts the opponent 4 wounds instead of only 2.

SARISSAS: are long pikes, about 4 or 5 meters long, used by Macedonian and Greek units.

- It provides all the benefits under the same circumstances as the spearmen ability.
- Additionally, it improves the effects of the "Phalanx" formation, turning the "attack priority" into a "single attack": When the unit has the phalanx formation active, it performs its attack without any possibility of response from the adversary.
- When a unit with sarissas has the phalanx formation activated and faces a unit with attack priority, the attack becomes a priority attack, but with that priority in favor of the sarissas.

COMPLEMENTARY UNITS: these are units that can act together. One is the main unit and the other is the auxiliary support unit (*helping to transport heavy equipment, providing cover against projectiles, etc.*).

- When deployed, two complementary units can start stacked, completely overlapping, with the auxiliary unit underneath and the main unit on top, perfectly aligned.
- In the activation phase, it is only necessary to activate the main unit for both to be activated.
- Stacking gives the main unit 1 extra DU for movement.
- In the case of melee, take into account the attack and defense values of the main unit.
- As long as they are together, both units will take any damage from ranged attacks or melee combat.
- If they are capable of doing so, the auxiliary unit can also fire projectiles when underneath.
- If they have javelins, you can play the event "Throw Javelins".
- In the Movement Phase, or due to a flight, the units can separate. If they do, they must separate completely (*they cannot overlap*). If the units separate, they cannot rejoin for the rest of the battle, and will behave as independent units. If wounded, both units will have that same number of wounds after being separated.

X - MODIFIERS

Below is a summary of the main modifiers, those that are not obtained through formations or unit abilities.

- ◆ **FLANKING:** the unit attacking from a distance or in melee from the flank (*side of the card*) has a +1/+1 modifier to all melee or ranged attack dice. The defender has -1/♣.
- ◆ **REARGUARD:** the unit attacking from a distance or in melee from the rear (*rear of the card*) has a +2/+2♣ modifier to all dice rolls. The defender has -2/♣.
- ◆ **FORCED MARCH or FLIGHT:** all of its sides are considered as rearguard, the effect is as always receiving the attack from the rear, ignoring where the attack is actually received.
- ◆ **ALLIES IN COMBAT:** if two or more friendly units are in melee combat with the same target unit, they receive a +1/+1♣ bonus and the defender gets -1/♣ morale for each additional enemy unit they face.

In this example, the Parthian cavalry attacks with 5 sections, one of them extending its left flank (+2/+2♣), two sections attacking from the flank (+1/+1♣) and another two from the enemy's front section. Finally, since it has an ally attacking that same enemy, it also gets an additional +1/+1♣. That is, it will have +4/+4♣ in total for the 5 dice it will roll, and the defender gets -4/♣ morale, so it is quite likely that it will receive the 5 potential wounds. In addition, the Roman is blocked, so it cannot maneuver or envelop. In its own combat, the other unit will attack the Roman with 2 dice with +2/+2♣ (+1/+1 from the flank attack and +1/+1 for the allied unit fighting against the same target).

◆ **GENERAL:** the Generals give specific benefits to the units where they are, as described in the General's card.

Additionally, Generals improve the morale of other units:

- All friendly units within their area of influence get +1/♣ to their morale value. The area is measured from either side of the General's card, and it is sufficient if it reaches part of the affected card.
- If the General is fleeing, wounded or dead, all friendly units in the battle suffer a -1 penalty to all their morale checks.

◆ **CASUALTIES:** the accumulated losses affect a unit's morale and attacking capabilities:

- Each wound gives -1/♣ morale.
- For every 3 wounds to a unit, it suffers a -1/-1♣ penalty to its attack value in both melee and ranged attacks, although the minimum attack value is always 1/1.

◆ **EXTENDED FORMATION:** units in extended formations have -1 morale for each extended section. An extended unit with an Enveloping marker on each side will have -2 morale.

HERO: certain events can cause heroes to appear on a unit. Units with heroes have a +1/+1 defense bonus and +1 morale. There can only be one "Hero" marker per unit.

NO OFFICER: as a result of an event, the officers of a unit may be lost. Units with a "No Officer" marker have a -1/-1 attack and defense penalty, both for ranged attacks and melee, and -1 morale. There can only be one "No Officer" marker per unit.

BROKEN UNIT: units with a Broken marker have -1/-1 attack and -1 morale. There can only be one "Broken" marker per unit. It should be noted that fleeing units have no additional penalties, apart from those already caused by being broken.

Ejemplo de algunas de las cartas de Generales que puedes encontrar en ONUS!

XI - MORE INFO ABOUT ORDERS AND EVENTS

In this section you will find more information about some of the Action cards:

- ◆ **VETERANS AND ELITES (event):** this event allows you turn a regular unit into a veteran, and a veteran unit into an elite. These statuses do not give combat modifiers, but influence how events are played:

Veterans: if you have a veteran unit in combat, you can discard the random event and draw a new one. The second card must be played, even if it is worse than the first.

Elite: it gives the same benefits as a veteran unit, but it also allows you to choose from these two options before the combat:

- You can draw 2 events at random and apply the one you prefer. Only if the opposing unit is not also an elite.
- Use 2 combat events from your hand, instead of 1.

At the start of the game, the players can agree to start with some veteran and/or elite units. Veteran units increase their value by 30% and elite units by 50%.

For example, if you decide that your unit of Legionaries (value 100) is a veteran unit, it will cost 130 points, and 150 if you want it to be an elite.

- ◆ **AMBUSH (event):** damage is applied immediately, after resolving the events, and combat is resolved as usual after that. The defender unit will have the same penalties as a broken unit for their attack. Wounds generated this way are considered to be part of the combat, so they count for determining who has to make a morale check.
- ◆ **THROW JAVELINS (event):** it is a special attack that only benefits units with javelins. It is only valid in combats that started that same turn after a charge (*it does not apply to units that were already in combat from previous turns*). If it appears as a random event, the attacker (*with javelins*) makes a short-range attack (*with no events*) and applies the results (and if damage is done, the defender will have to make a morale check).

Then proceed to melee combat as usual. In that combat, if the defender also has javelins, they will also have a +1/+1 defense bonus by "*softening*" the enemy charge, in addition to making a ranged attack as above. If the event is played from the hand, it only benefits whoever played it.

- ◆ **THE WIND CHANGES (event):** for the purpose of determining range, the original and not the new target will be taken as a reference. That is, if the original target was in short range you will roll 4 dice, even if the new target is farther away or even out of range. In case there are no units of the active player within 2 DU of the original target, no attack is performed (*not even the original one*).
- ◆ **STAMPEDE (order):** the player who plays stampede must activate one of their units. All units, friendly or foe, that have animals (*horses, elephants, dromedaries...*) and are within 4 DU of an edge of the activated unit's card, must make a standard morale check, with any applicable modifiers. Cavalry (*including chariots*) will have a -1 penalty, while other animals (*elephants, dromedaries...*) will have -2. Any unit failing the check will be in flight, which will be carried out immediately.

Then, the activated unit can move and fight normally in that turn.

XII - OTHER WAYS TO PLAY ONUS!

In this section you will find a series of optional rules that players can agree to apply before the battle begins. The most seasoned players can adapt them and even add new rules to improve the historical recreation or the fun (*although with caution so as not to unbalance the game*).

A. OPTIONAL RULES

ROOKIE GENERAL

If one of the players is playing ONUS! for the first time, you can balance the game by increasing their army points.

ALWAYS ACTIVE GENERAL

The General unit is always active, without the need to play an order for it. By doing this, the General unit can move and fight every turn. This variant can make the Generals more powerful, especially those of higher value. If a General already has the ability to always activate the unit they are in, this rule allows the General to activate any additional unit (*one*) each turn.

SEVERAL GENERALS

Each player can have several generals in their army. The one with the highest leadership will be the commander-in-chief. The leadership of the army will be determined by the commander-in-chief. In case of a tie, you must choose one at the start of the game. If the commander-in-chief dies, is wounded or flees, take the second highest leadership value as the army's leadership thereafter. If the commander-in-chief recovers, they will return to lead the army. The penalty of -1 morale for the entire army due to the loss of the General will only apply if there are no Generals left. For the game to end due to the loss of the General, all of them must die or flee. Morale bonuses for being close to a General are not cumulative in case there are several Generals in range. If the army consists of several armies, you can have one General for each of them. In this case, the General must always be in a unit of their own army and their positive leadership (+1 morale) only applies to their army's units.

Likewise, if the General dies, the -1 penalty will be applied to all units of their own army. You can also pair each General with troops in a given area during initial deployment. **For example**, if your army has 3 Generals, you can assign one General to each flank and the third one to the center of the army. You must clearly specify which units are commanded by each of them.

To calculate the value of the army, add the values of the Generals to the units they will command.

PLAYING WITHOUT EVENTS

To reduce the randomness and duration of the game, it is possible to play without random events and only play those that the players have in hand.

LIMITED VISIBILITY

To reflect how adverse conditions (rain, fog, dust...) affect visibility, you can apply the limited visibility rule. In these cases, players may agree on specific conditions at the beginning of the game. **For example**, you want to simulate a battle in a foggy day and you agree that: Shooting at more than 2 DU (-1 to ranged attacks) and it is impossible to attack from a distance of more than 6 DU.

FOG OF WAR

To reflect the real difficulty of distinguishing units at a distance in battle, the “*fog of war*” rule can be applied.

To do this, determine a distance beyond which there is fog of war (e.g. 6 DU) and apply the following rules:

- ◆ All units start the game face down, showing the back.
- ◆ All enemy units that are at a distance greater than the fog of war from any of your own units remain hidden face down (*you know where they are, but not which units they are*). As a general rule, and unless a historical scenario states otherwise, both armies will stay hidden after the initial deployment.
- ◆ Hidden units can move normally and will remain hidden until they are closer to an enemy unit than the fog of war distance. When this happens (*even mid-movement*) reveal it immediately.
- ◆ Units that become visible at any point cannot hide again, even if they move beyond the fog of war distance.
- ◆ If a hidden unit makes a ranged attack, it must reveal itself before the attack.
- ◆ Ranged attacks against hidden unit have a -1/-1 attack penalty.
- ◆ If a hidden unit receives a ranged attack, it must be revealed if it has suffered at least one hit.

PROTECTED FLANKS

In the battles of Antiquity it was customary to advance in formation showing only one front and protecting the flanks. This improved the morale and defense of the unit. For this reason, you can apply this rule to reflect that fact.

A unit engaged in close combat is considered to have protected flanks when:

- ◆ The enemy attack is limited to the front of the unit. There is no direct contact, not even with Enveloping markers, on the flanks or in the rear.
- ◆ There is a friendly unit positioned on the unit's flank, in such a way that it is not possible to place an Enveloping marker on that flank (*less than 2 cm*).
- ◆ The unit with a protected flank receives +1/♣ morale for each protected flank it has.

ADVANCING IN LINE

To get your army to advance while maintaining the formation, without playing too many Action cards, you can implement this rule. In the Activation Phase, discard 2 Action cards to carry out the order **Advance in Line**, which allows you to activate a whole line of units that are not in combat, with the following limitations:

- ◆ You can activate all or part of the units “in line”. All movements must be made in the same direction (*move forwards, diagonally, backwards...*) and move as many DU as the movement of the slowest unit in the line.
- ◆ Units can perform ranged attacks and even charge if the movement allows them to make contact with the enemy.

A **line** is defined as an indeterminate number of units that meet the following conditions:

- ◆ Each unit must be at a distance of less than 1 DU, from any point on its flank to the flank of another friendly unit.
- ◆ Each unit is connected to two units, one on the right and one on the left flank, except at the ends of the line, where only one connection is required.

In this example you decide to move your army forward and discard two Action cards to advance in line. Your line is formed by units A, B, C and D. Unit X is too far away. You could also have formed the line with Y instead of B, but not with both since each unit only connects with one on each flank. You can also decide to form the line with only A and B (you don't have to extend it to the maximum). But you would not be able to activate A and C, since they do not connect to each other and you are required to activate everything you define as part of the line. In the movement phase, your entire line moves in the same direction. In this case, you decide to "balance" your line. In addition, you make a standard movement with D as well, but you start its movement with a 90° rotation to align it with the rest.

INTIMIDATING DROMEDARIES

Greek historian **Herodotus** (5th c. BCE) said that, in battle, the Lydian horses were scared by the smell and noises of the Persian camels. Whether or not this anecdote from the father of History is true, we couldn't resist incorporating an optional rule to reflect this fact:

- ◆ Camel (or dromedary) units are unsettling for horses. Enemy horse units (including chariots) engaged in melee combat with a camel unit will suffer **Fear**, i.e., they have a -1 morale penalty and are forced to check their morale if they enter combat.

REINFORCED UNITS

All units have 2 health points more than what their card says. Thus, fights may last longer, but there will also be more fleeing. This increases the strategic relevance of morale, although it may lengthen games.

B. GAMES WITH 4 OR 6 PLAYERS

We highly recommend this game mode, as it makes the games more fun as players on the same team can cooperate. In these games the agreed army points must be distributed among the allied players of each team.

- ◆ **DEPLOYMENT ZONE:** the easiest and most common way to do this is for each player to be in charge of one flank and, if there are 3 players per team, for one of them to lead the central section of the army on the battlefield and the other two to lead one flank each.
- ◆ **TYPES OF UNITS:** another option, not exclusive with the previous one, and quite common in Antiquity, is that one General commands the infantry units, the other the mounted units and/or the other the ranged units.
- ◆ **DIFFERENT ARMIES:** if there are mercenaries, auxiliary troops or other armies within one army, you can group those units under one general per army.

The distribution of army points for allies in a team does not have to be balanced, but the total must not exceed the agreed upon total for the battle.

The turn order may be carried out in 3 ways:

- ◆ **TEAM TURNS:** the recommended option for convenience and agility of play is for allies to play their turns together, phase by phase. That is, a new phase does not begin until all players on a team have completed the current phase.
- ◆ **ALLIED TURNS:** another option is for allied players to play one after the other, and then the same for the other team.
- ◆ Each player's turn is resolved as usual.
- ◆ **ALTERNATING TURNS:** it is possible to agree on alternating turns, i.e., first player A of team X plays, then player B of team Y, player C of team X and finally player D of team Y.

C. GAMES WITH 3 OR 5 PLAYERS

You can play ONUS! battles even with an odd number of players. In this case you can choose between 2 options:

- ◆ **PLAYER WITH 2 GENERALS:** the team with fewer players will have a player managing 2 Generals, with 2 hands of cards, as a game with 1 additional player, with each General activating their own army.
- ◆ **FREE-FOR-ALL:** you can play a battle in which several armies all fight against each other. Play alternating turns and ensure that the initial deployment is equidistant, or as agreed by the players.

The turn order and the distribution of troops can be done in the same way as described for the 4 or 6 player games.

IMPORTANT RULES SUMMARY

◆ **ACTIVATE UNITS:**

You cannot activate a unit more than once per turn, nor can you play 2 order cards on the same unit in the same turn.

◆ **SECTIONS:**

Roll as many dice as sections are in contact. Both the attacker and the defender always roll the same number of dice.

◆ **COMBATS:**

Unless otherwise specified by the unit's ability or card effect, attacks are simultaneous.

◆ **EVENTS:**

Events are played in combats between 2 units or in ranged attacks. A combat can have from 1 to a maximum of 3 events. Two duplicate events cannot be played in the same turn.

◆ **MODIFIERS:**

The modifiers applied to attack, defense and morale will be the same for all sections or dice rolled. A unit's minimum value after the modifiers is 1.

◆ **MORALE CHECK:**

Perform a morale check for every combat if it's simultaneous. If not, perform a morale check for every attack that caused damage. Events may alter this rule.

◆ **CRITICALS AND FAILURES:**

When rolling to attack, a 1 is always a failure and a 6 is always a hit or an automatic wound, regardless of the result.

◆ **PHASES:**

The active player must play all the phases in the established order and, once finished, draw the corresponding number of cards before passing the turn to the other player.

◆ **SKIRMISHERS:**

They can make a regular movement even if they shoot or make movements in any direction.

◆ **FORMATION CHANGES:**

They must be performed at the start or the end of the movement.

◆ **MOVING THROUGH UNITS:**

You cannot move through friendly units that are in a specific formation (*blue markers*).

GLOSSARY OF TERMS

MODIFIERS SUMMARY

MELEE ATTACK

If the unit has a General:

- ◆ +1/0 attack (*from the flank*)
- ◆ or +2/0 (*from the rear*)

- 1 for every 3 Wounds
- 1 if the unit has No Officer
- 1 if the unit is Broken

⚙ PHALANX: +1 and damages first, both as attacker and defender

⬆ ARROWHEAD: +1 when charging

🛡 SPEARMEN: +1 against Cavalry and other mounted units if they fight head-on

🏹 LUNGE: +1 when charging against infantry and damages first

RANGED ATTACK

- 1 for every 3 wounds
- 1 if the unit has No Officer
- 1 if its Line of Sight is blocked

MORALE

- +1 if the units is within a General's area of influence
- +1 if the unit has a Hero
- 1 if the General is dead or fleeing
- 1 if the attacker causes Fear
- 2 if the unit is Marching
- 1 if the attack comes from the Flank

MELEE DEFENSE

- +1 if the unit has a Hero
- 2 if the unit is Marching
- 1 if the attack comes from the Flank
- 2 if the attack comes from the Rear
- 1 if there are Other Enemies attacking the unit
- 1 if the unit has No Officer
- ⚙ SQUARE FORMATION: +2 against Cavalry.
- 🛡 WALL OF SHIELDS: +1
- 🛡 SPEARMEN: +1 against Cavalry and other mounted units if they fight head-on.

RANGED DEFENSE

- +1 if the unit has a Héroe
- 2 if the unit is Marching
- 1 if the attack comes from the Flank
- 2 if the attack comes from the Rear
- 1 if the unit has No Officer
- ⚙ SQUARE FORMATION: -1
- 🛡 WALL OF SHIELDS: +1
