

How to play Project Energy

▶ Setup

Shuffle the decks separately, each player chooses a color then each player takes 4 cards from his/her own deck.

▶ Starting

Youngest player or the player who lost the previous match, starts by placing a card on the edge of the gray card and then player takes a new card from his/her own deck.

Then other player places a card on the edge of any card and then player takes a new card from his/her own deck.

Ending

- ▶ If the decks run out, the player who has more energy wins.
- ▶ If three factories come side by side **in a straight line**, both player loses.

Important things to note

- The 2x bonus only affects the amount of energy in the **white circle**.
- Factory disables those around it and flips them, excluding diagonals. The flipped card's effects and energy disappear.
- It is forbidden to place cards outside of the board.
- It is forbidden to rotate cards in 1. Version

= 6⚡ →

= 6⚡ + 2⚡ + 3⚡ = 11⚡

= 2x6⚡ + 2⚡ + 3⚡ = 17⚡

$$= 5\text{⚡} + 1\text{⚡} + 2\text{⚡} + 2\text{⚡} + 3\text{⚡} + 3\text{⚡} = 16\text{⚡}$$

$$= 5\text{⚡}$$

Version 1

- ▶ Version 1 of the game is the simplest version.
- ▶ In this version card rotation is not allowed.

Version 2

- ▶ Version 2 of the game is a bit more complex.
- ▶ In this version cards are square, card rotation is allowed and adds a special card: makes the amount of energy on the White area zero but unlike the factory does not affect external effects and does not flip the card.

= -5 ⚡

= 2x(-5 ⚡) = -10 ⚡

= 6 ⚡

= 6 ⚡ x 2 x 0 + 1 + 5 = 6
