SHAHCARD - GAME RULES

SHAHCARD is based on the classic rules of chess, but adds a new dimension to the game with strategic card support.

Basic Rules

1) Before the game begins, players agree on how many cards will be drawn in total. This allows players to decide how much chance will influence the game.

2) At the beginning of each turn, the player first draws a card, then makes a move with one of their pieces.

3) The player may activate the card immediately, or save it to use on a future turn.

4) The card can be used either before or after moving a piece.

5) Each card can only be used once and is then sent to the graveyard (discard pile).

6) Once all cards are used up, the game continues according to classic chess rules.
