

The cover art features a central, detailed illustration of a futuristic orbital station or spaceship. The station is primarily white and grey with prominent yellow and orange accents. A large, glowing blue screen on the front shows a character in a blue suit standing in a futuristic interior. Several astronauts in full space suits are visible: one is working on the left side of the station, another is on top right using a tool, and a third is on the bottom left. The background is a dark blue space filled with stars. At the top, the text 'STAR SCRAPERS' is written in a metallic, blocky font, with a jagged, orange, crystalline structure behind it. Below this, the word 'ORBITAL' is written in a very large, bold, white sans-serif font. A white orbital ring with a central white dot is positioned to the right of the word 'ORBITAL'.

STAR SCRAPERS

ORBITAL

WORK IN PROGRESS

RULEBOOK

STAR SCRAPPERS ORBITAL

The international space industry is beginning to grow again after the Hy'Dran Wars! To encourage the development, global funds are awarding prizes to corporations that are outstanding in different areas. As the owner of one of these corporations, you compete to build the biggest, best, and most beautiful space station the worlds have ever seen...

INTRODUCTION

Welcome to the Star Scappers universe! Have a seat and get comfortable in the commander chair on an orbital - one of many space stations that are being constructed in the asteroid belt called the Sybil Cloud. Deposits of Hexis - the most desired mineral in the entire Galaxy - have been discovered there, attracting numerous daredevils willing to extract the precious crystals. Miners have to do business and enjoy themselves somewhere, so you and your corporation are here to provide them with accommodation and, naturally, to get rich!

TERRONS

Terrons, the orbital builders, are descendants of the humans who came to this galaxy a long time ago. Over a thousand years, united in the Interstellar Teron Federation, they have colonized many corners of the universe. The democratic system of the Teron society has encouraged the creation of many independent structures, such as cor-

porations, commercial consortiums and mercenary guilds. By making contact with different alien species, they have caused their civilization to flourish and their influence to spread. At the base of their success lies ambition. Ambition that knows no bounds. This trait of character drives Terrons ever forward, to conquer new territories, to discover the unknown, to push the frontier of the Federation another step further. Their military forces are well-known across the Central Sector, as they strike fear in the hearts of alien beings inhabiting the Galaxy. They became famous during the two Hy'Dran Wars, proving unshaken and well-trained. Even now, in times of peace, the Terron fleet remains ready to defend their territories. And their businesses.

OTHER INHABITANTS OF THE GALAXY

In the distant future, countless alien species explore the Galaxy in search of fortune and fame. The last interstellar war with the Hy'Dran Empire ended over fifty years ago and since then peace treaties have been in power. Newly discovered cosmic nations, like the cybernetic Bioss and the expansive Weedlocks, are beginning to influence the fate of the Galaxy, while the inhabitants of ancient planets, such as the mechanical Metanels and the mysterious Minegglers, are once again striving to achieve their goals.

GAME CONTENTS

88 module cards	45 MegaCredit tokens
36 event cards	15 damage tokens
5 Structural Core Module tiles	1 Year card
5 Upgraded Core Module cards	1 Year marker
25 crew meeples	1 First Player marker
45 Victory Point tokens	

GAME OVERVIEW

The game spans 5 years (rounds), marked on the Year card by the Year marker.

Variant: To enjoy a longer game, you may choose to play 6 years instead of 5. After the Year marker reaches the last space on the track, play one more round.

In Star Scrapers: Orbital, each player builds their own orbital, starting with a core module. During the game, they take turns to perform one action each: build modules to expand their orbitals, play event cards, make repairs, buy cards from the market, and operate their modules. When everyone has passed consecutively (usually because they run out of cards or money), the year ends and Victory Points (VPs) are awarded to the players with the most non-damaged modules in each color. Then each player gets new crew, money, cards, and starts the next year.

There are 6 kinds of modules that each have their own color and theme:

- » Structural (red) – General functions
- » Bio (green) – Providing crew
- » Commercial (orange) – Income
- » Support (brown) – Building/Repairs
- » Scientific (blue) – Drawing cards
- » Military (purple) – Attack/Defense

When 5 years (or 6 in a longer version) are completed, the player with the most VPs wins the game.

GAME SETUP

1. **Core Module:** Each player takes a Structural Core Module tile and places it in front of them on the table (note: although it isn't represented by a card, it counts as a regular red module for VPs and building purposes). Any unused Structural Core Modules are placed back in the box. Place the 5 Upgraded Core Module cards (green/blue/yellow/purple/orange) in a row at the center of the table.

2. **Market:** Shuffle the deck of cards (containing modules and events) and place it below the Upgraded Core Modules at the center of the table (with space for a discard pile on one side, and the market on the other side). Reveal the top 5 cards of the deck and place them in a row away from the deck. These cards may be bought using the Purchase action.

3. **Crew:** Start with 1 unused crew on your Core Module (as indicated by the crew support symbol on the module).

4. **MegaCredits and other tokens:** Place the MegaCredits (money) tokens at the center of the table. Each player starts with 16 MegaCredits. Place the Victory Point and damage tokens in separate pools next to the MegaCredit pool.

5. Cards: Deal 8 cards to each player. They choose 5 cards to keep in hand, and return the other 3 to the top of the draw deck. Then re-shuffle the whole deck.

6. First Player and Year card: Choose the First Player randomly and give the First Player marker to this person. Place the Year card on the table and place the Year marker on space 1 on it.

GAME ROUND

During a game round, the players take turns taking actions until everyone has passed. On your turn, you can only take 1 of the following actions:

» **Build. Price: 6 MC.**

Build a module, playing a module card from your hand and adding it to your orbital. If you connect the module to a module of the same color, the cost is reduced by 1 MC.

When connecting a module to another, the new module's entrance (in-arrow) is placed at the exit (out-arrow) you want to build from.

A new module must always be connected to a free exit on your orbital. The modules on your orbital cannot overlap, cover one another, etc. You may not build a module that should leave your orbital without any usable exits!

» **Upgrade. Price: 4 MC.**

Once per game, you may upgrade your Core Module. Choose one of the available Upgraded Core Modules and place its card

on the designated space on your Structural Core Module tile. Your Core Module is not red anymore, but it gains the color of the upgraded Core Module card. And you now have a special effect or bonus for the rest of the game!

» **Purchase. Price: 1-5 MC.**

Purchase one of the cards from the market to your hand. The card furthest away from the deck costs 1 MC, the next one 2 MC, and so on, and finally 5 MC for the card closest to the deck. When a card is purchased, the remaining cards are moved toward the deck to close the gap and form a new row where the cards now cost 1-4 MC, and so on. The market card furthest away from the deck always costs 1 MC.

» **Operate**

Use the action indicated on one of the non-damaged modules on your orbital. Pay the cost (crew/money) indicated before the arrow, and get the effect indicated after the arrow. Take the required number of crew from the Core Module and place them on the operated mod-

ule. The crew and the module may only be used once per year. Note that modules that have no arrow printed in the text box are always active and don't require any action or additional payment.

» Play Event

Play an event card from hand. Perform the effect and then discard the card to the discard pile at the center of the table. If you can't perform the effect of the card, you can't play it.

» Repair. Price: 3 MC.

Remove 1 damage token from one of your modules.

» Pass

If you pass on your turn, you can still take actions later, but if all players pass consecutively, the year ends immediately and no more actions can be taken. If you can't do anything else, passing is your only option.

END OF YEAR

At the end of each round of the game, perform the following steps exactly in the following order:

1. Victory Points: For each of the 6 module colors, 1 VP is awarded to the player(s) with the most non-damaged modules of that color. Core Modules count too! **During the last year of the game, 2 VPs are awarded for each color instead of just 1. Then the game ends and the player with the most VPs wins the game.** In case of a tie, the player with the most non-damaged crew support symbols wins. If still tied, the player with the most MC wins.

2. Market: Discard any remaining market cards, and draw 5 cards to form a new market row away from the deck.

- 3. Crew:** All players remove all crew (used and unused) from their orbitals, then gain new crew. The number of crew is determined by adding all crew support symbols on all non-damaged modules on an orbital. All new crew are placed on the Core Module, where they count as unused crew until they are moved to another module in an Operate action.
- 4. MegaCredits:** Each player gains 7 MC and chooses a color. They then get 1 MC for every non-damaged module of that color on their orbital.
- 5. Cards:** Each player draws 4 cards to hand. If they now have more than 5 cards (handsize limit), they discard the excess until they have exactly 5 cards. If the deck runs out of cards, shuffle the discard pile to make a new deck.
- 6. Maintenance:** All damage is removed from all orbitals. Note that damaged modules may affect VPs, crew, money, and handsize in the previous steps, before the damage is removed.
- 7. New Year:** Move the Year marker to the next space on the Year card, and pass the First Player marker clockwise to the next player. That player becomes the new starting player for the new year.

IMPORTANT GAME CONCEPTS

» **Damage:** When a module is damaged as a result of a card effect, put a damage token on it. A damaged module may not use its color, ability, crew support symbols, and you may not connect new modules to it while damaged. For example, it doesn't count towards getting VPs, income, and crew at the end of the year. A module may be damaged multiple times, adding more damage tokens to it. Multiple Repair actions are then needed to repair it (or wait for the Maintenance step at

the end of the year to remove all tokens at once). Core Modules (both Structural and Upgraded ones) cannot ever be damaged. A module connected to a damaged module is not affected and may be used normally.

» Exterior module: A module that has no other modules built onto its exits is called an exterior module. These modules are more exposed and may be targeted by the Meteor Storm event card or the Weapon Platform action.

SOLO RULES

Peace Version

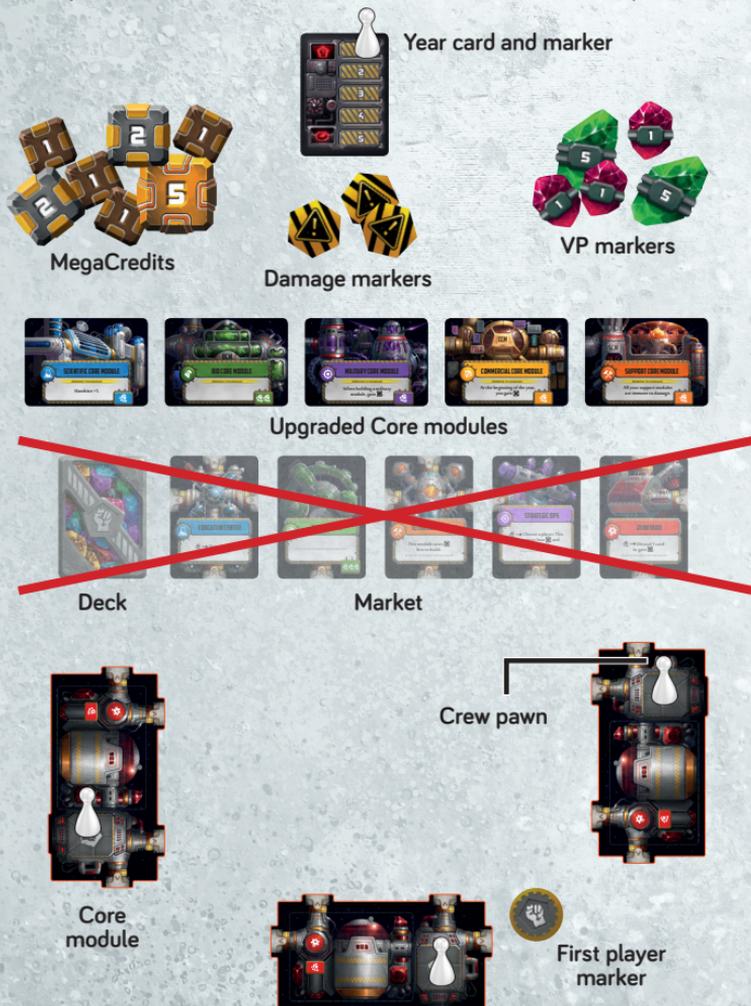

This solo version uses 2 simplified “opponents” that are outside of play and only determine what is required for gaining the VPs that you compete for. You play alone and you have many strategic options at your disposal; this variant will test your building skills!

Setup: Remove all event cards from the deck. Use 2 Structural Core Modules for your “opponents”.

Gameplay: At the start of each year (even the first), each “opponent” draws 3 cards (modules) from the deck and adds them to its station, regardless of requirements and other restraints. They do not pay or connect them, just add them to what you have to compete with, preferably sorted into 6 stacks according to color. The “opponents” do not get any resources and they do not take any actions during the game. You play your turns as normal, but the effects of your cards can’t target the opposing orbitals. After 5 years, you add up your VPs, and if you score at least 18, you win!

Competitive (Bot) Version:

This solo variant uses 2 bot players to play against. The bot players are handled by the bot algorithm and follow the normal rules with just a few exceptions, as detailed below. Use the normal setup and rules for a

3-player game (5 years) with the following exceptions:

- » No market is used in this version.
- » Each bot starts each year with 5 cards in “hand” (a face-down stack).
- » A bot targeted by the Uneventful Year event card discards the top card from its hand stack.
- » The Insider Contacts event card makes you draw 2 cards from the deck instead of taking 1 from the market.

Bot turn algorithm:

On its turn, the bot will act with the following priority:

1. If a bot has cards in its hand-stack, it reveals the top card.
 - » If the revealed card is an event and the bot can play it, it does. Exceptions: A bot never plays Visiting Worker, Economic Crisis, and will only play Crew Rotation and Cold War if it gains anything from it. High-Risk Project will always use up all remaining crew. When choosing targets for an event, the bot targets the leading player if possible (i.e. you or the other bot, depending on who currently has the most VPs), or the next player to the left if there is a tie. Module targets are chosen from the inside out clockwise, starting “west” of the Core Module. The first legal target is chosen, except that the bot will not damage an already

damaged module.

» If the revealed card is a module and the bot can build it, it does, paying as normal or using Command Center or Military Command if possible. The module is connected to a module of the same color to get the discount if possible, and if several exits are available, it is placed using the same method as when choosing a module target. It can't build a module that would leave the station without any exits.

» If a bot can't play the card, it is discarded instead, and the bot gains 2 MC. The bots may be bad builders, but they do get this bonus to their economy, as well as a full hand of 5 cards each year.

2. If a bot has no cards, it will operate a module, if able. Use the same method for choosing modules until a module is chosen that has an usable Operate action. A bot will not upgrade its Core Module, or use the Operate action of the Robotic Arm. Command Center and Military Command are only used when building a module (see above), not when the bot is out of cards. Workshop is only used when repairing (see below). When a bot uses Observatory, it simply draws 1 card instead of choosing one from 3. Military modules will choose targets using the same targeting method as described above for event cards.

3. If a bot has no cards and no available crew actions, it will try to repair any damage, prioritizing modules using the same method. Workshop is used if possible, and any functioning Airlocks reduce the repair cost as normal.

4. If a bot has nothing else it can do, it passes.

5. To win, you must beat the bots like in a normal game! If you like, the bot players may also be added to a regular multiplayer game
