

A game by Erik Andersson Sundén

★ WHIRLING ★ WITCHCRAFT™

2-5

30 Min

Age 14 +

Welcome witch, your workbench is waiting...

Being a witch is all about wielding powerful magical ingredients. The more powerful, the more brilliant magic they can produce. But be careful, one witch can only wield so much power before everything blows up in their face. This is a fact you're willing to use to your advantage when you're trying to destroy your nemesis. However, while you're brewing the ingredients to get the job done, someone else is trying to do the same to you! Well, at least you've got some more ingredients to work with now, you just have to make sure you're not the one who blows up.

Objective

Players use their recipe cards to produce as many ingredients as possible. They place these ingredients in their cauldron to send to their nemesis: the player on their right. However, each player's workbench can only hold a certain amount of ingredients; when a player sends more ingredients than their nemesis can hold, the ingredients are instead placed in the player's Witch's Circle.

The first player to have 5 or more ingredients in their Witch's Circle wins the game!

Contents

Your game of *Whirling Witchcraft™* should include the following components. If it does not, please visit <https://alderac.com/customer-service> for assistance.

1 Rulebook	60 Recipe cards
5 Player boards	17 Personality cards
5 Cauldrons	170 Ingredient cubes
5 Reference cards	15 Arcana tracker tokens

Assembling the cauldrons

Component anatomy

Player boards

The player board is where players store their ingredients.

A. Witch's Circle

B. Workbench

- a. 3 spaces for Hearts of Shadow 🐾
- b. 4 spaces for Mandrakes 🐸
- c. 9 spaces for Toads 🐸, Spiders 🕷️ & Mushrooms 🍄. These are the basic ingredients.

Recipe cards

The recipe cards are used to transform ingredients.

A. Arcana

B. Ingredient input spaces

C. Recipe direction symbol

D. Ingredient output spaces

E. Initiative

Personality cards

A. Ability side

Contains either a unique power or a unique recipe.

B. Ingredient side

Specifies starting ingredients.

Rules on personality cards may override the rules in the rulebook.

Setup

1. Give each player a player board, a cauldron, and a reference card.

2. If players are new to the game:
Give each player an Initiate personality card (marked with a ☾).

If players are familiar with the game:
Deal each player 2 random personality cards (not Initiate). Each player chooses 1 to keep and returns the other to the game box.

They place their personality card, with the ingredient side up, below their player board.

3. Shuffle the recipe cards and deal each player 4 cards face-down. These form the player's hand which they can look at, but should be kept secret from other players.
4. Place the recipe deck within reach of all players.
5. Place all ingredient cubes in a general supply within reach of all players.
6. The 5 ingredients are:

Toad

Spider

Mushroom

Mandrake

Heart of Shadow

7. Give each player ingredients according to their personality cards, placing them on the corresponding spaces on their workbench. Each player flips their personality card to its ability side. If it has any arcana icons, they adjust the arcana tracker on their reference card accordingly. (see page 4)

The round

Each round is played in 2 phases:

Study phase - In which players add new recipe cards to their tableau.

Brewing phase - In which players produce ingredients that are sent to their nemesis in an attempt to overwhelm them.

Study phase

The study phase is played in 3 steps:

1. **Play recipes** - Each player plays 1 recipe card from their hand.
2. **Reveal recipes** - Each player reveals their played recipe card.
3. **Resolve arcana** - Resolve arcana on revealed recipe cards.

Each step is resolved simultaneously for all players before moving on to the next step.

Play recipes

Each player simultaneously chooses 1 of the recipe cards in their hand and places it face-down below their player board, next to any recipe and personality cards already placed there. Everyone must play a recipe card, even if they will not be able to use it this round.

Recipe cards with ? as their recipe direction symbol may be rotated, switching the input and output sides, when they are played. The player who plays the recipe card must choose which way to play it before revealing it. Once the recipe card has been revealed, it may not be rotated again.

Normal

Rotated

Reveal recipes

All players reveal the face-down recipe cards they played in the previous step.

Resolve arcana

Some recipe cards have 1 or more arcana icons  /  /  at the top of the card.

Each player increases the count on the arcana tracker on their reference card for any arcana icons on the newly revealed recipe card. When a tracker reaches or passes an even number, marked , the player may trigger that arcana effect that turn.

Arcana effects trigger on each even number.

It's possible to play without using the arcana tracker, by simply counting the arcana icons each time a recipe card is played, and triggering the corresponding effect when a played recipe card means the amount reaches or passes an even number of arcana icons of a type.

If a player chooses not to trigger an arcana effect, they cannot save its use for a later turn. They must gather more arcana to reach or pass an even number to trigger the same arcana effect again.

Arcana effects:

The player may **add 1 ingredient of any type from the general supply directly to their cauldron** as though they had just output that ingredient from a recipe.

The player may **remove up to 2 ingredients** from their workbench. The ingredients may be different or the same type.

Choose a type of ingredient (for example Spiders). For this round, the player may **take ingredients of that type from the supply** as if they were on their workbench **when filling recipe inputs**.

Some cards may have multiple arcana icons, which can allow a player to trigger multiple arcana effects at once.

Example of resolving arcana

1. Kiki has 1 Potion and 1 Raven arcana.
2. She plays a recipe card with 1 Potion, 1 Raven and 1 Book arcana and adjusts her arcana tracker accordingly.

3. Both the Potion and Raven arcana reach even numbers, meaning both their effects may be triggered.
4. The Book arcana reaches 1, meaning its effect can not be triggered this round.
5. Next round, Kiki plays a recipe with 2 Book arcana icons and adjusts her arcana tracker accordingly.

6. The Book arcana passes an even number, meaning its effect may be triggered.

Brewing phase

The brewing phase is played in 4 steps:

1. **Produce ingredients** - All players produce ingredients using their recipe cards.
2. **Pass cauldrons** - Each player passes their cauldron to the **right**.
3. **Check for winners** - If a player has 5 or more ingredients in their Witch's Circle, they win.
4. **Pass recipe cards** - Each player passes their hand of recipe cards to the **left** then draws up to their hand limit of 4 cards.

Each step is resolved simultaneously for all players before moving on to the next step.

Produce ingredients

All players produce ingredients using the recipe cards below their player board. The recipe cards can be used in any order.

To use a recipe card, a player must:

1. Place matching ingredients on all input spaces of the recipe card.

The ingredients used can come from the player's workbench or from the output spaces of previously used recipe cards.

A recipe card's input spaces must always be fully filled. It is not possible to partially fill a recipe card.

2. Place matching ingredients from the general supply on all output spaces of the recipe card.

Players don't have to use all their recipe cards, even if they have the ingredients to do so. This also applies to a recipe card with no pictured input ingredients.

Each recipe card may only be used once per round.

Some recipe cards have hybrid input or output spaces  where the player can choose which of the pictured ingredients to place. Each time the player uses the recipe card, they may choose either of the pictured ingredients..

Example of producing ingredients

1. *Matilda uses the first recipe card by placing 1 Mandrake and 1 Toad from her workbench on its input spaces.*
2. *From the general supply she places 1 Mandrake on the first output space. She can choose to place either 1 Mushroom or 1 Spider on the second one. She chooses to place 1 Mushroom.*
3. *Matilda uses the second recipe card by placing 2 Mushrooms on its input spaces, 1 from her workbench and 1 from the output of the previously used recipe card.*
4. *She places 1 Mandrake and 2 Spiders from the general supply on the output spaces.*
5. *Matilda chooses not to use the third recipe card, even though she has the necessary ingredients.*

When a player has used all the recipe cards they want, they move all remaining ingredients on the output spaces of their recipe cards to their cauldron. Then they move the ingredients from the input spaces back to the general supply.

There is no limit to the general supply. In the unlikely event that players run out of ingredient cubes in the general supply, they should let players return ingredients from the input spaces of their used recipes before they are finished. If this is not enough, use temporary substitutes.

On rare occasions, timing of who decides to produce which ingredients will matter. If there is ever a situation where the order of players matters, the player with the lowest initiative on their most

recently played recipe card goes first. The player with the second-lowest initiative goes next, and so on. To keep the game flowing it's strongly advised that players only use this turn order when absolutely necessary.

Example of using initiative

1. *Piper played the recipe card with initiative 17 (rotated).*
2. *Rebecca played the recipe card with initiative 18. Before Piper chooses what ingredient to produce with her recipe card, she wants to know which ingredient Rebecca chooses to use as input for her recipe card. Likewise, Rebecca wants to know what ingredient Piper will produce before choosing what ingredient to use as input for her recipe card. They decide to play in initiative order to resolve this.*

3. *Since Piper played the recipe card with the lowest initiative this round, she is forced to make her decision first.*

Pass cauldrons

Each player passes their cauldron, and all ingredients on it, to the player on their right. The receiving player adds the ingredients from the cauldron they just received to the corresponding spaces on their workbench. After filling the spaces, any ingredients that do not fit on a player's workbench are placed in the Witch's Circle of the player to their left (the player who passed them the cauldron).

The number of ingredients that can fit on the workbench (as shown by the pictured spaces):

Example of passing cauldrons

1. *Trixie has 1 Heart of Shadow and 2 Mandrakes on her workbench after producing ingredients.*
2. *Yennefer passes her cauldron, with 2 Spiders and 4 Mandrakes, to Trixie.*
3. *Trixie places the 2 Spiders and 2 of the Mandrakes on her workbench.*
4. *Since she can't fit the last 2 Mandrakes on her workbench, they are placed in Yennefer's Witch's Circle.*

Yennefer's workbench

Trixie's workbench

Check for winners

If any player has 5 or more ingredients in their Witch's Circle, they win the game. If no player has won the game, continue to the next step of "Pass recipe cards".

In the case of simultaneous winners, the player with the most ingredients in their Witch's Circle is the winner. If there is still a tie, the tied player with the most different types of ingredients in their Witch's Circle is the winner. If there is still a tie, the tied player with the least number of ingredients total on their workbench is the winner. If there is still a tie, the tied players share the victory.

Example of checking for winners

1. *Sabrina has 5 Hearts of Shadow in her Witch's Circle after passing cauldrons.*
2. *Willow has 4 Mandrakes and 2 Spiders in hers.*
3. *Since they both have 5 or more ingredients in their Witch's Circle, the game ends and they are tied for winning. Since Willow has more ingredients in her Witch's Circle (6 vs Sabrina's 5), she wins the game.*

Sabrina's workbench

Winner!

Willow's workbench

Pass recipe cards

Each player passes all remaining recipe cards in their hand to the player on their left, then draws up to their hand limit of 4 cards.

Start a new round and keep playing until a winner is found.

Personality card clarifications

Some personality cards are discarded when using their unique power. Discarded personality cards are placed back in the box and are not used more this game.

Clairvoyant

Typically, when drawing cards before starting a new round, the Clairvoyant player draws 2 cards (to their hand limit of 5) and the player to their left draws no cards (to their hand limit of 4).

Daredevil

The arcana effect triggered by this ability is in addition to any arcana effects the player would normally trigger that round.

Frog Whisperer & Hidden Power

For these recipes, the player chooses any output ingredient of their choice. For Hidden Power the ingredients may be different or the same type.

Potion Brewer

When adding an ingredient to their cauldron from their workbench, the player may choose any type of ingredient.

Spellbook Scholar

The player may spend the Mandrake for this effect from their workbench or output from recipes. The player may use this ability in addition to a Book arcana effect triggered normally.

Trickster

During setup, the recipe is placed with the Mushrooms as input. This personality card breaks the rule of recipe cards not being able to rotate once revealed.

Uncontrolled Powers

If the player adds more ingredients to their workbench than spaces to hold those ingredients (e.g. more than 4 Mandrakes) they place the extra ingredients in the Witch's Circle of the player to their left.

Whirlwind

The player may choose to rotate any recipe card as it is played, even if it normally could not be rotated. The recipe cards still cannot be rotated after they are revealed.

Witch of All Trades

If the player has at least 1 each of Hearts of Shadow, Mandrakes, Mushrooms, Spiders and Toads in their cauldron after producing ingredients but before passing their cauldron, they may move 1 ingredient of any type from their cauldron to their Witch's Circle.

Special thanks:

This game wouldn't exist if it wasn't for my loving and supportive family, My Sundén, Gustav Sundén, Elias Sundén, and Therese Jansson. Thank you for your enthusiastic playtesting of the game. Two other persons have supported me more than anyone could expect from friends during the creation of this game: Benny Wallin and Erik Lindblom. The game might not be a haiku anymore, but I cannot imagine what this game would've been without you.

Niklas Høøk, the way you lifted Whirling Witchcraft for me before Fastaval 2019 was amazing. I will forever be grateful!

The passing of resources around the table was inspired by a real-time 3D brick building game that I sincerely hope will be published, so I can play it with my family. I would like to thank the creators and designers, Magnus Karlsson and Henrik Gidmark for the beautiful idea! And thank you for all the help with the playtesting!

Martin Bonnevier, Vegard Farstad, Tim Green, Magnus Karlsson, and Bez Shahriari - thank you for your careful readthrough of the rules. And of course, thank you Hanna Knytt Björkman for the final editing of the rulebook - invaluable!

Neil, your continuous support and never ending will to improve this game this past year has been absolutely invaluable and I sincerely hope that this is not our last collaboration. Thank you!

John Zinser, I am amazed at your belief in me as an unpublished designer. It is an honour to publish a game under the wings of AEG. Thank you for the encouragement and support!

And finally, thank you all people that have playtested this game, not the least at Fastaval 2019. It has been a pleasure to hear your thoughts and feedback of the game.

I am sincerely grateful!

Erik Andersson Sundén

Whirling Witchcraft won the

Best game 2019 award at Fastaval 2019.

Thank you for all the encouragement!
